ANTIMATTER KINGDOM

The Evolutionary Cornerstone of the Blockchain Industry

Injecting Power into Bitcoin

Allowing Blockchain to Evolve & be Reborn

Let the force of AK be with us

PREFACE

ABOUT LIMITS

CXC has reached the limits of the current blockchain field in all aspects:

**LIMIT OF THE KERNEL
LIMIT OF EXPRESSION
LIMIT OF TECHNOLOGY
LIMIT OF SPEED ACCELERATION
LIMIT OF COLLABORATION
LIMIT OF CONSENSUS
LIMIT OF VISION**

......

While science and technology finance scholars from various countries praise the advanced technology and systems of CXC, CXC has advanced to an even higher peak.

CXC Will Once Again Surpass the Expectations of the World

BEYOND THE LIMIT

PERSEVERANCE MAKES A KING

Having won so many honors and created so many miracles, CXC still considers itself imperfect. The world is so beautiful and so hard-hearted that only by persevering to achieve perfection can it be stronger.

Is the range of groups we cover sufficiently broad?

Can our technology stay ahead?

Can we inject contribute energy into the industry?

Can we assume more social obligations?

Are the market beliefs strong enough?

Is the ecological foundation strong enough?

Can the financial models continue to evolve?

With the venture into the mid-to-high end market taking on a leading role, CXC is about to enter the lower end market, that is 10 times bigger, and which will greatly enhance the technological support base of the ecosystem.

More importantly, CXC will now become the champion of the disruptive evolution of digital assets, such as Bitcoin, injecting new life into the industry.

The AK platform derived from the CXC system will bear this responsibility. AK is short for Antimatter Kingdom and is a super mining node application launched by the CXC team.

Antimatter is the rarest and most expensive "matter" in the known universe, and a 2006 NASA paper predicted that producing 1 gram of antimatter would cost $25bn. When matter and its antimatter meet, a complete matter-to-energy conversion occurs, and this process is annihilation, which is the most efficient fuel in terms of currently known physical reactions. The annihilation of antimatter can produce 9×10^{16} J, which is 30,000 times that of nuclear fusion.

AK's original distribution corresponds to the rare properties of antimatter
AK's future value corresponds to the high financial value of antimatter
AK's ability is to mine at extremely high speed to contain the antimatter annihilation

The combination of AK and CXC will form a new financial model that will amaze global technology and financial experts, and will go down in the annals of civilization.

ABOUT AK

ANTIMATTER KINGDOM is a super mining application group launched by CXC public blockchain. AK's mission is to inject the Force into Bitcoin and let the blockchain evolve and regenerate.

AK belongs to CXC, but it has developed independently and has been blessed by its mother. At the same time, AK and CXC have been combined to form a new financial model that amazed experts in technology and finance all over the world. It is enough to be recorded in the history of civilization.

ABOUT CXC

CXC public blockchain, developed anonymously by multi-national geek groups, is a second-generation public blockchain that integrates cross-chain technology and realizes second-level transfer for the first time in the whole network. It is an unprecedented large-scale social experimental project.

CXC is all called CAPITAL X CELL PUBLIC BLOCKCHAIN, which is called CAPITAL X CELL for short. C on the left represents CAPITAL, C on the right is CELL, and X is the connection between the two ends. It also represents infinite fission capability and unknown evolutionary possibilities.

After 3 years of research and development, CXC has surpassed most blockchain projects in terms of mode, technology, and ecological layout. Since its launch on July 4, 2019, CXC has repeatedly broken world records and achieved goals that other projects are difficult to achieve.

TOP1 OF CXC

Eight months after the emergence of CXC, it has created a number of world firsts:

· The world's first second-level currency transfer shocked the industry

· The world's most offers from exchanges (over 70)

· Unique POA double-peak Mining System, combining the identity of user and miner

· Multi-national community linkage, amazing fission development speed

· Unswerving belief in the co-founders of the whole network

· Public chain ecological expansion technology foundation is completed

· Rapid iterative evolution of concept, technology and ecology

· Being copied all the time, however the imitators can never catch up

THE POWER OF AK

ANTIMATTER KINGDOM

The initial release of AK corresponds to the rare properties of antimatter,

The future value of AK corresponds to the expensive value of antimatter,

The AK extreme speed mining contains the ability for antimatter annihilation.

AK, combined with CXC, will form a new financial model that will amaze global technology and financial experts, and be enough to be recorded in the history of civilization.

AK & CXC

AK to CXC, is like Android to Google, or Marvel Group to Disney. While AK is part of the mother body, it develops independently, while receiving the essence from the mother body, and at the same time, continuously developing the source ecology.
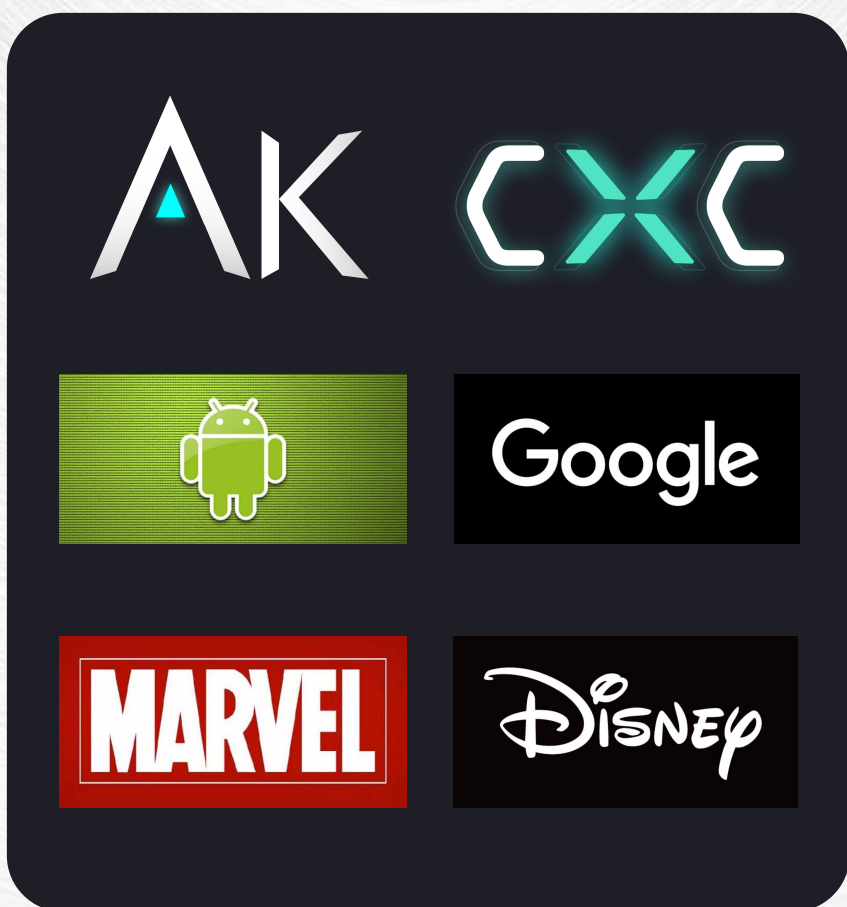

AK has an independent APP, and at the same time can fully inherit the CXC user relationship network, and thus participants can benefit from both.

AK SYSTEM COMPONENTS

AK is the official release of the CXC super node mining platform, the basic composition application of the CXC ecology foundation, and the outbreak cornerstone project of the CXC ecology.

AK mining is composed of four core application modules: BTC soul mining, CXC annihilation mining, AK infinite mining and bit collision.

The application details and application value of each module will be described in detail.

Bit collision

BTC Soul Mining

CXC Annihilation Mining

AK Infinite Mining
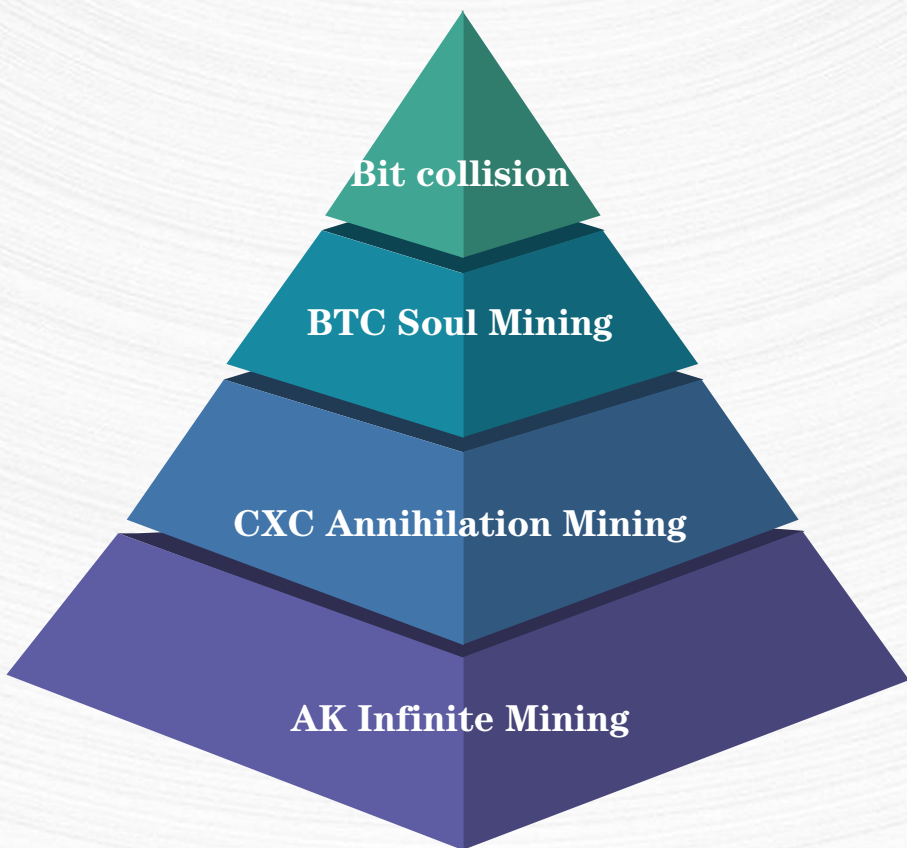

What pain points does AK solve?

PAIN POINT 1

Most people keep asking about Bitcoin, but few invest.
Bitcoin, as a blockchain world currency and with the largest investment volume, depends entirely on the support of user belief and miners' costs, lacks a systematic and reasonable mechanism for lock-in, which makes its value vulnerable to the spread of information, and different policies and markets from around the world. Even though the mining output is expected to be halved in 2020, the actual performance will have difficulty in boosting the value of the currency.

PAIN POINT 2

The current global node layout of CXC can satisfy its own needs, but to truly cope with the computing needs of the full-chain ecological explosion in the future, the layout of the underlying super node needs to be started out from now.

PAIN POINT 3

The majority of CXC's current users come from high-net-worth people, and it has not been involved in the world's lower end market; once this part of the market is opened up, it will be time for CXC's potential to be truly released.

PAIN POINT 4

Typically, the fission energy dynamics in the lower end market is much higher than in the high-net-worth population.

PAIN POINT 5

In addition to the existing mining system, does CXC have more effective mechanisms to reduce circulation in order to adapt to the growing market demand?

AK DISTRIBUTION PLAN

AK is the name of the platform and also the name of its own platform currency, AK is a cryptocurrency issued and based on the CXC public chain. The total number of AKs is 300m, of which 10m are issued by Bit Collision, 10m for platform building, 20m for global community operations, and the remaining 260m are produced through mining.

AK is produced daily through the POA engine. The initial release mined about 250,000 AKs per day, and the mining output is reduced by 18% every 90 days.

TOTAL 300,000,000

260,000,000
Produced by mining

10,000,000
Initial distribution by Bit Collision

10,000,000
Platform construction

20,000,000
Global community operation

AK MINING DISTRIBUTION

260m AKs can be mined and produced:

1%-10% output through BTC soul mining

1%-10% output through CXC annihilation mining

80%-98% output through AK infinite mining

1%-10%
BTC Soul Mining

1%-10%
CXC Annihilation Mining

260m POA Mining output

The rules and application value of each mining mode will be detailed later.

> 80-98%
AK Infinite Mining
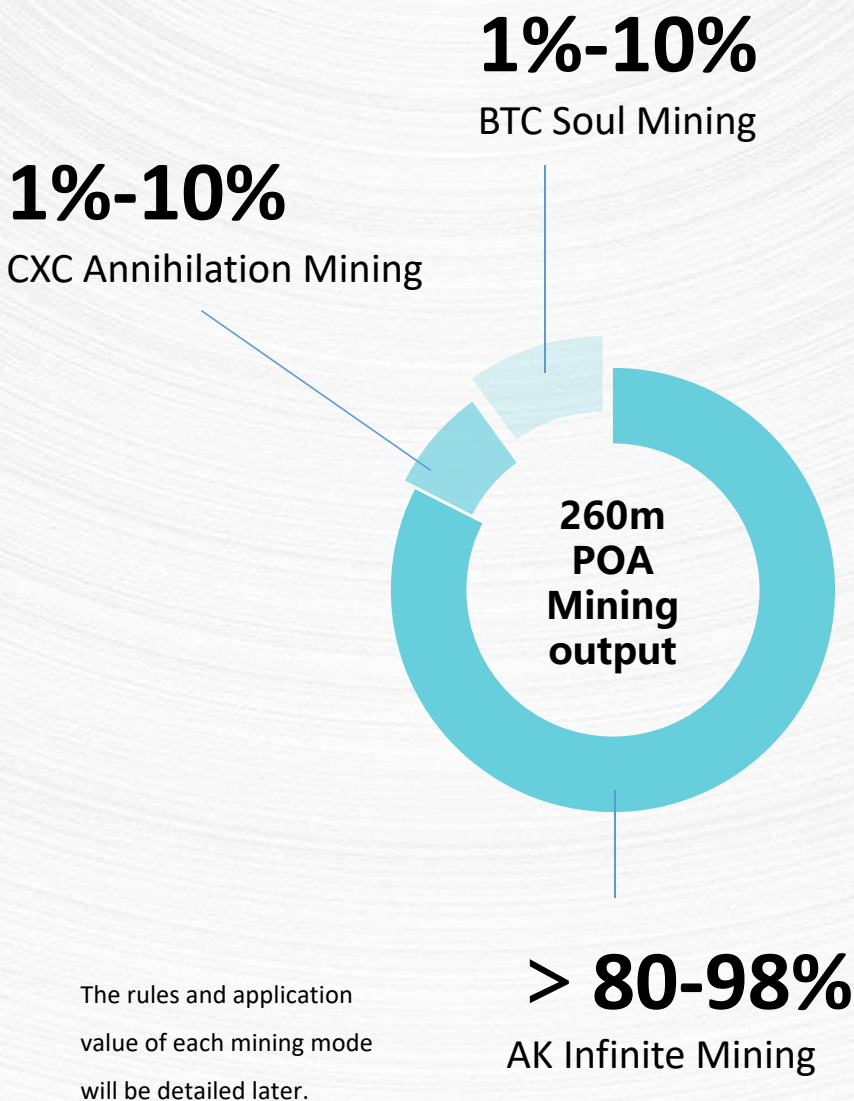

BTC CUTS OUTPUT BY 50% EVERY 4 YEARS

AK CUTS PRODUCTION EVERY 90 DAYS

18%

Intensive value wave
Inflation will cease to exist
It will be difficult to obtain coins in the market

Mining settings are written in a smart contract and cannot be
changed once the operation has been launched

AK MINING OUTPUT REDUCTION REFERENCE TABLE

Mining cycle	Daily output	Reduction	Mining amount
1	250000	-	22500000

BTC SOUL MINING

AK is based on the CXC public chain of the pioneering POA mining mechanism, has developed a more robust combination mining system, and has extended the benefits of miners from their own public chain to the entire system of cryptocurrency.

The BTC is the world's only trillion-dollar digital asset by market capitalization, but most holders are holding on to it, looking for higher values, and not contributing more.

Today, through AK, all BTC holders, without the need to transfer into Bitcoin, only need to sign a soul contract with AK , and can then obtain the corresponding AK output, the binding contract BTC is still completely free and is a private individual asset. They can transfer transactions at any time, Transferring BTC outside will terminate the contract and continue to mine after re-signing the contract.

This is equivalent to AK airdropping AK tokens to believers in global Bitcoin, and is the first time BTC has been able to lock itself in. This good deed of AK will surely lead to more people spreading the gospel of Bitcoin and for blockchain co-builders. This global injection of power means Bitcoin will gain unprecedented market recognition.

BTC soul mining can mine up to 10% of the AK produced daily.

Highest non-destructive
mining of 10% AK
# TYPICAL APPLICATIONS OF CROSS-CHAIN TECHNOLOGY

BRIDGE

CONNECTING BRIDGE OF VARIOUS PUBLIC BLOCKCHAINS

BTC Soul Mining is a typical application of CXC public blockchain cross-chain technology, which has a high technical application threshold.

BTC SOUL MINING RULES

Soul Contract

Transfer **0.001 BTC** to the designated signing address to sign the BTC mining soul contract, with a minimum signing amount of **0.1 BTC**.as long as the BTC in the BTC address remains locked (no outward transfer), on day D+2 can participate in soul mining, and the AK with a yield of **1%-10%** is divided daily.

AK non-destructive mining by individual daily = 1% to 10% of AK production on that day * The number of individuals signing contract BTC accounts for the entire network

The collective consensus determines the individual income, and the total amount of BTC signed by the whole network determines the total amount of AK in one day to be distributed to the coefficient of 1%-10% of the BTC contract mining:

Total contracted BTC across the network	One-day AK total production contract allocation coefficient	Total amount of AKs with initial mining difficulty mined daily
X<600	1%	2500
600≤X<900	2%	5000
900≤X<1900	3%	7500
1900≤X<2700	4%	10000
2700≤X<4500	5%	12500
4500≤X<6500	6%	15000
6500≤X<9500	7%	17500
9500≤X<12500	8%	20000
12500≤X<20000	9%	22500
20000≤X	10%	25000

ONE MORE THING

Corresponding basic AK mining coefficient

1-10% AK can be mined free of charge through the BTC Soul Contract.
1-%10% AK more CXC can be mined through CXC annihilation mining.
80%-98% AK can be mined through AK itself.

But don't forget

BTC contract and CXC annihilation mining are the entrance ticket for AK mining and determining the number of AKs to be mined. During the effective period of BTC soul mining, 35% AK infinite mining coefficient can be obtained（**At the same time participating in CXC annihilation mining coefficient is higher**）, and holding AK can obtain AK currency holding calculation power, the personal computing power multiplied by the AK infinite mining coefficient, and this coefficient is determined by the BTC contract and CXC annihilation mining:

Mining form	Invested Amount	Corresponding AK infinite mining coefficient
BTC Soul Mining	0.1 (No investment required)	**35%**
CXC Annihilation Mining	30	**50%**
	100	**55%**
	500	**65%**
	1,000	**75%**
	5,000	**85%**
	10,000	**90%**
	50000	**100%**

* If you participate in BTC soul mining and CXC annihilation mining at the same time, the higher corresponding coefficient shall prevail.Specific modalities will be detailed later

NOTES ON SOUL MINING

Addresses of exchanges and centralized wallets

Mining of exchanges and centralized wallets address binding is not supported, **only decentralized wallet address** binding mining is supported, please do not sign soul contract with exchange BTC address, otherwise the produced AK will belong to exchange and centralized wallets BTC address

Because some wallet applications (e.g. imToken) transfer the BTC balance in the wallet to the new address during transfer, resulting in the original address query balance being 0, thus the signing contract becomes invalid, so please be sure not to use the BTC wallet with "payment address ≠ change address"

For example:

The original wallet address has 0.0995 BTCs. After transferring 0.0001 BTCs, the remaining 0.0993 BTCs are transferred to the new change address after deducting the miners' fees.

This will lead AK to judge that the balance of the original BTC address is 0 and the soul mining contract is invalid

SUGGESTIONS ON WALLET USAGE

In order that you are not affected by [Note 2], BTC soul mining can be successfully completed. The following wallets can be satisfied: change address = transfer-out address. It is recommended to use:

HUOBI	BitKeep	Kcash	AToken	HyperPay

Orient Walt	HUOHUO HD	CXC Wallet	AK Wallet	Waiting for updates

Method A- AK and CXC wallet
The soul contract can be signed directly in the AK wallet, and the CXC wallet needs to transfer BTC into the AK wallet before signing.
If BTC is transferred to AK wallet from exchange or wallet, please select [Cross-chain Asset Management-Recharge] method.
If BTC is transferred from CXC wallet to AK wallet, please select direct transfer.
Method B- Third Party Wallet
BTC is stored in the third-party wallet, open the AK wallet and sign the contract as prompted.

Wallets not currently recommended:

imToken	Math Wallet	Jaxx	Bixin	TokenPocket

Waiting for updates

The above suggestions only represent that after testing, the above wallets conform to the functional standard of "transfer-out address = change address", but do not represent any direct or indirect security commitments and guarantees, nor do they assume any relevant responsibilities. Please pay attention to the identification and operate carefully.

BTC SOUL MINING RULES

How to ensure that the contract is valid

During the signing period, if there is any transfer out of the signing address, the contract will be automatically terminated.

Transfer-out BTC：

If any binding BTC contract address has a transfer-out of BTC, the contract will be automatically cancelled, it will need to bind again and takes **D+2** days to take effect.

Transfer-in BTC：

After the binding of the contract, it can be transferred into BTC to improve the mining computing power, and the BTC miraculously transferred from the contract will be effective on the next day **(D+2).**

Activity Requirements

To enhance the activity of the whole community, BTC Soul Mining needs to renew the contract at least once a week**(D+7)** in the AK wallet. Each renewal costs **0.001BTC.** Failure to renew the contract in time will automatically cancel the contract, and AK cannot be produced during the cancellation period.
It can be renewed in advance, and the next renewal time is also D + 7.

Minimum contract requirements

The minimum binding is **0.1 BTC.**

Settlement Time

Daily settlement of yesterday's AK mining proceeds will begin within 5 hours after CXC mining proceeds are released.

Special Suggestion

Spending renewal fee ≠ transfer-out behavior, will not lead to termination, but please keep the balance at least more than 0.1BTC at the signing address. If the balance of the contract signing address is less 0.1BTC due to renewal cost procedures, the contract will be cancelled. Please reserve a certain amount of demand handling fee as far as possible.

COMPARISON OF MINING MODES

Principles based on innovation and participation for all
Based on its own technology advantages
CXC doesn't go the usual way
Strive to reduce participation threshold and risk of mining

Mining mode	Representative currency	Mining Cost Threshold Risk	Remarks
Professional mining machine	BTC、LTC、BCX..	Very high	Very power consuming and costly, the special-purpose mining machine can only be treated with waste metal after being retired
CPU Mining	XMR、ETN、BTV..	High	Monopolized by the server market
GPU Mining	EHT、ETC、ZEC..	High	Monopolized by professional teams Severe depreciation after video card is retired
Hardware Mining	Burst、Storj..	Mid to low	Wearing of hard disk
CDN Mining	Wanke Cloud	Low	Bandwidth Utilization
POA Mining	**CXC、AK**	**Low**	**Holding coins means mining, fission is mining, everyone is a miner**
Contract Mining	**BTC non-destructive mining of AK**	**0**	**No investment required, 0 cost, 0 risk, and rapid industry growth**

WIN - WIN

AcxcK

BTC trillion dollar market value soul
Injecting into CXC ecosystem
BTC gains the ability to voluntarily lock positions

Industry-wide follow-through

0 RISK

BTC SOUL MINING

WHEN BTC HOLDERS SIGN A SMART CONTRACT

The Bitcoin is still their own
Daily mining gains are also theirs

AK

CXC

CXC ANNIHILATION MINING

The CXC itself has a mining system, but there are 200 CXC thresholds, and 200 CXC is only the minimum requirement. In order to obtain higher computing power, you need to invest more money or fission more nodes, which causes many excellent potential co-builders to be willing to do so but yet are unable to invest and can only wait and see.

In view of this situation, AK introduced a low-threshold CXC accelerated mining service, namely CXC annihilation mining:

Through the optimal node layout model, the system builds a super mine with each node being 10,000 CXC, to maximize the yield of coin holding, double-peaks, invitations and holding time.

Participants share the super mining revenue according to the proportion of input CXC, with the lowest input of only 30 CXC, which would be tens to hundreds of times more than an individual single node, and the CXC that is invested in the mine is permanently locked out, which we call annihilation.

In addition, apart from accelerating CXC mining revenue, each day AK with a yield of 1%-10%, is simultaneously mined and assigned to annihilation mining participants.

At the same time, CXC annihilation mining is the basis of participation in AK infinite mining, and because of the participation depth determines the output depth of AK infinite mining.

Accelerate the mining of massive CXC

Annihilation

Moderately mine 10% AK
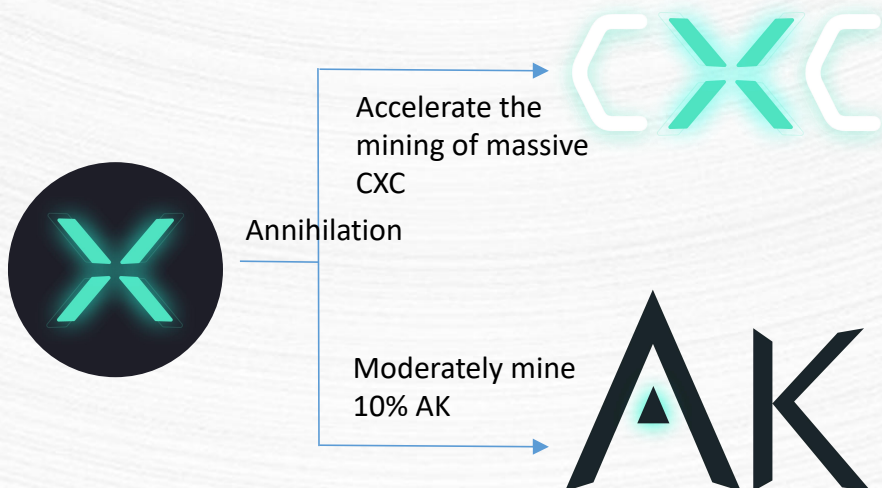

CXC ANNIHILATION MINING RULES

CXC annihilation mining enables participants to have 3 capabilities:

A. Accelerating mining of CXC

This revenue is derived from the dynamic allocation of CXC extracted daily from the super mine,

Personal motivation consists of three components:

1) Annihilation Power

The amount of personal investment in CXC corresponds to the annihilation power of 3-5,000 different grades

2) Double Peak Power

Using the original double-peak mining structure of CXC, the sum of annihilation power of each node under the Green peak or the Ice peak (taking the peak of lesser power) is used, and then multiplied by the double-peak dynamic coefficient, obtaining (6%-20%), detailed on the following page.

3) Invitation Power

Multiply the annihilation power of the direct invitation account by the sum of your own invitation power coefficient (8% -30%).

The Revenue of CXC annihilation mining =

Personal Power ÷ Total Mine Power ✗ CXC Annihilates Mine's Mining volume

Sharing mining produces 1-10% of AK per day

Percentage of individual power in total mines ✗ 1%-10% of daily AK mining capacity.

Total CXC in annihilation mines	Allocation ratio of AK mining output per day
X < 5 Million	1%
5 Million ≤ X ≤ 7 Million	2%
7 Million ≤ X ≤ 13 Million	3%
13 Million ≤ X ≤ 17 Million	4%
17 Million ≤ X ≤ 29 Million	5%
29 Million ≤ X ≤ 37 Million	6%
37 Million ≤ X ≤ 53 Million	7%
53 Million ≤ X ≤ 71 Million	8%
71 Million ≤ X ≤ 95 Million	9%
X ≥ 95 Million	10%

AK Revenue from CXC Annihilates Mining =
Personal power ÷ total mine power ✗ daily mining output 1%-10% AK

CXC ANNIHILATION MINING RULES

C. Corresponding AK infinite mining coefficient

The amount of CXC is corresponding to the different AK infinite mining coefficients, and more AKs can be mined, the highest level of investment is 50,000 CXC, with the prerequisite of double-peak power full-level cap of level 6must be reached for it to take effect.

Annihila-tion Level	CXC invested	Accelerating mining of CXC			Extra reward to mine 1%-10%AK	Corresponding AK infinite mining coefficient
		Annihilation Power	Double peak power coefficient	Invitation power coefficient		
L1	30	3	6%	8%		50%
L2	100	10	8%	10%		55%
L3	500	50	10%	12%		65%
L4	1000	100	12%	15%	1%-10%	75%
L5	5000	500	15%	20%		85%
L6	10000	1000	18%	25%		90%
L7	50000	5000	20%	30%		100%

Special reminder: to satisfy both low enough participation threshold and deep enough participation depth, **each node has 3 annihilation participation opportunities and 3 opportunities that the sum of annihilation CXC numbers determines the final annihilation level.** This operation is irreversible, please think twice before operation to avoid the situation of insufficient level caused by insufficient annihilation quantity. Each upgrade will take effect after D+2.**In addition, there is a capping condition for double peak power, the capping value is 30 times of annihilation power,** and the overflow part enters lucky bonus pool and AK cycle bonus pool, which will be described in detail later.

ADDITIONAL NOTE ON ANNIHILATION MINING

CXC annihilation mining determines whether there is a corresponding benefit to inviting BTC soul mining

The depth of participation in CXC annihilation mining determines the inviter's AK double peak power addition coefficient and the inviter's computing power addition coefficient (detailed on the following page).

When the invitee digs out the AK to generate the corresponding AK hoding computing power, it will contribute the double peak computing power and the invitationcomputing power to the inviter, thus generating higher income.

If the inviter himself does not participate in CXC annihilation mining, the addition coefficient of AK double peak computing power and invitation computing power is 0, and the inviter cannot enjoy the potential corresponding benefits.

INVITATION NETWORK DESCRIPTION

Invitation Network Universal+Network Bifurcation

AK and CXC are closely related and share the CID account system of CXC.

The CXC invitation relationship as of 10:00 March 31, 2020 Hong Kong time, after the AK goes live, you can synchronize the invitation relationship by importing a private key or mnemonic.

CIDs registered after 10:00 on March 31, 2020 will exist separately under the invitation network of CXC and AK, and will no longer be synchronized.
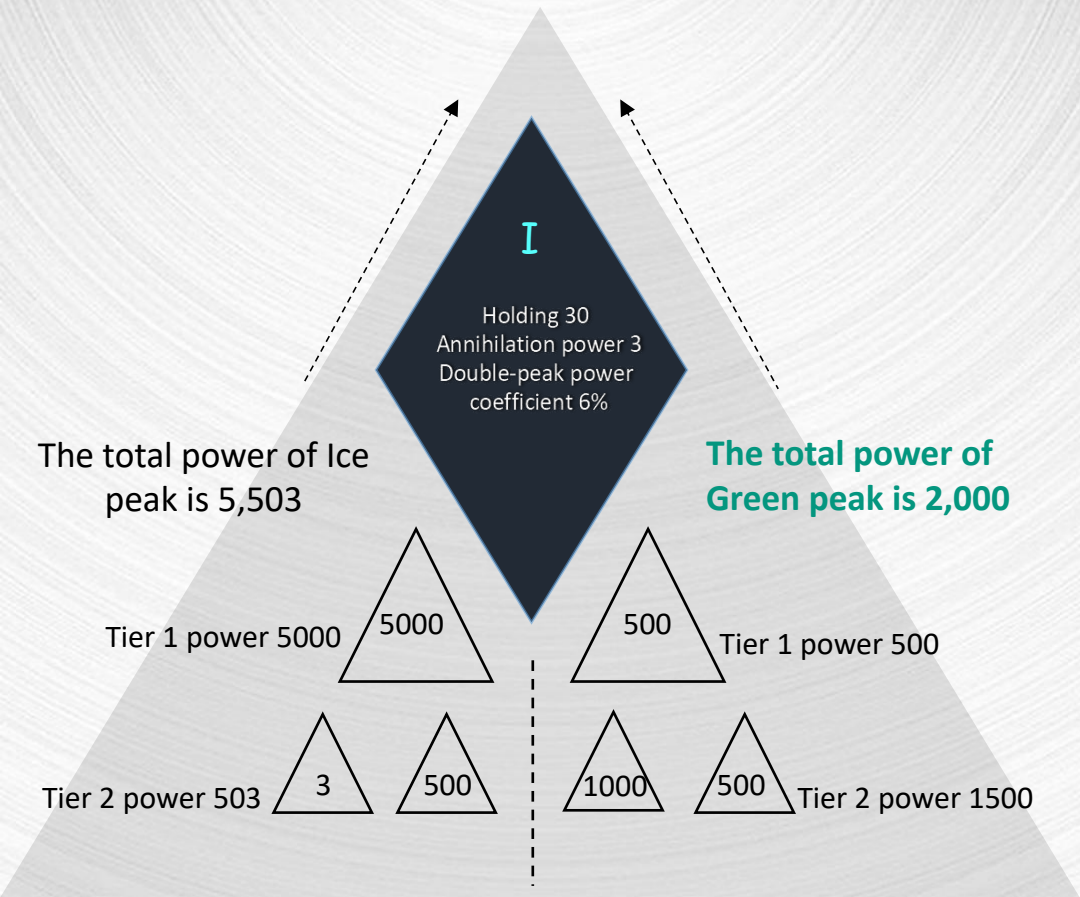

That is, to fully protect the rights and interests of old users and to ensure that new users can better develop the market.

WIN-WIN

DOUBLE PEAK DYNAMIC CALCULATION SIMULATION OF ANNIHILATION MINING

Double-peak power using the original CXC double-peak structure

After comparing the total power of the Ice and Green peaks, the smaller value of 2,000 multiplied by the double-peak power coefficient of 6%, then the final value is obtained by applying the capping rule.

I

Holding 30
Annihilation power 3
Double-peak power
coefficient 6%

The total power of Ice peak is 5,503

The total power of Green peak is 2,000

Tier 1 power 5000 — 5000

500 — Tier 1 power 500

Tier 2 power 503 — 3 — 500

1000 — 500 — Tier 2 power 1500

Participating in the CXC annihilation mining has its own infinite-level double-peak mine, each mine can accommodate countless lower-level CID double-peak mine structures in accordance with the invitation relationship. First calculate the sum of the annihilation power of each layer of the Ice and Green peaks, then the double-peak combined calculation power is compared, the smaller value is multiplied by its double-peak power coefficient to get the double-peak power.

The double-peak power is applied with a capping rule, **the capping value = 30 times the annihilation power of the holder,** and the remaining capping power is included in the total power of the mine.

In the above figure, amount invested is 30 CXC , **the annihilation power is 3**, the double-peak power is smaller at the Green peak, the value of 2,000 multiplied by the double-peak power coefficient of **6% is 120.** Using the 30 times capping rule, the double peak power is finally calculated as **90** (3 * 30 is less than 120), and the excess 30 power is included in the total power of the entire network.

Mining CXC invested will take effect on day D + 2.

ANNIHILATION MINING FORMULA

CXC annihilation mining revenue =
Personal Power ÷ Total Mine Power ✕ Mining Volume of CXC Annihilation Mine

AK Revenue from CXC Annihilates Mining =
Personal power ÷ total mine power ✕ daily mining output 1%-10% AK

Personal motivation =
Annihilation Power**+**Double Peak Power**+**Invitation Power

Double Peak Power=
Green-Ice peak power (lower power peak) ✕ double peak power coefficient
At the same time, the capping rule of 30 times annihilation power is applied.

Invitation Power=
Annihilation Power of All Direct Push Users ✕ Invitation Power Coefficient

Total mine power =
The sum of the personal power of the whole network**+**the sum of the overflow parts of the personal power of the whole network

COMPARISON OF MINING REVENUE

CXC Annihilation Mining vs. CXC Original Individual Mining Revenue Estimate

Invested CXC mining volume	Accelerated CXC+AK Mining Consolidated Revenue Enhancement
30	∞ Infinite
200	Greatly improved
1,000	Greatly improved
10,000	Greatly improved

THE VALUE OF ANNIHILATION MINING

Lowers the threshold and expands the market

Increases mining revenue, with a small investment and large revenue, and significantly lowers the threshold for public chain participation. At the same time as strongly cultivating the market of high-net-worth people, we are opening up to the lower end market of nearly 10 times the size, enabling CXC consensus to take root and flourish in all levels around the world.

Doubling the acceleration of development

Fully stimulating the fission energy of the lower end market, which is typically 10 times more dynamic than the high-net-worth population, enabling CXC to accelerate to reach the phase goal of being the world's second largest market value digital asset.

Value enhancement

Through annihilation mining, the circulation of CXC will be greatly reduced, and the holding value will be increased for a long time.

CXC

AK INFINITE MINING

MINE THE MOST AK

AK adopts the user system of CXC, and at the same time has its own mining computing power calculation module, through the computing power of the coin holding, coupled with the bonus of double-peak, invitations and the holding time of the coin holding computing power, forming an independent mining system, producing **mining of 80%*-98%** of AK every day. **(It fluctuates according to the amount of BTC soul mining and CXC annihilation mining coins).**

Unlike CXC, AK coin-holding computing power is no longer divided into L1 to L4 nodes in four intervals, but is calculated by the proportion of individual coin-holding in the total amount, with the lowest investment of 50 AK, you can generate computing power, we call it infinite mining.

Infinite mining further reduces the cost of holding coins, and greatly reduces the cost of node layout and management, and only needs one node to realize the maximization of personal computing power.

AK *Infinitely mining 80%~98%AK* AK

AK INFINITE MINING RULES

Divide > 80% of daily AK mined

After annihilation mining, investing in AK can mine a larger amount of AK. Participating in CXC annihilation mining can obtain infinite AK mining rights, according to the amount of CXC input corresponding to different degrees of AK currency computing power and different levels of double-peak bonus coefficients, invitation bonus coefficients, coin duration bonus coefficients.

AK involved in mining will not be locked and will be taken as it is stored, and the calculation power will take effect on day D + 2 after the transfer.

AK personal computing power =
Coin holding computing power + double peak computing power + invitation computing power + coin holding time computing power

AK Personal Mining Benefits =
Proportion of personal computing power to the whole network* AK infinite mining coefficient * Total AK output on the same day * （80%-98%）

CXC Annihila-tion Level	Invested CXC	AK Coin holding computing power	Double-peak computing power AK bonus coefficient	Invitation computing power AK bonus coefficient	Coin holding time AK bonus coefficient	AK infinite mining coefficient
L1	30	Calculate coin holding computing power according to AK holdings, 1AK = 1 Computing power. Takes effect on D + 2, 300 random snapshots are taken daily, and the minimum holding amount is the current holding amount for the calculation of computing power. A minimum of 50 AKs is required to compute power.	6%	8%	The computing power of hold AK continuously reach for 30 days, 30% of the minimum tokens holding this power within 30 days.	50%
L2	100		8%	10%		55%
L3	500		10%	12%		65%
L4	1000		12%	15%		75%
L5	5000		15%	20%		85%
L6	10000		18%	25%		90%
L7	50000		20%	30%		100%

* The highest input level is 50,000 CXC, requires 10,000 levels in double-peak power must reach the full-level cap to take effect.

* The cap value is 30 times of AK's token holding computing power, and the maximum cap value is 30 times of 50000 AK's computing power, is 1.5 million. As the computing power of AK double peaks overflowing from the cap is cleared, it will no longer affect POA mining.

* AK infinite mining coefficient, double peak coefficient and invitation coefficient are all determined according to the number of CXC annihilations, reaching the corresponding number and automatically upgrading the mining coefficient (D+2 takes effect from the date of reaching).

CIRCULAR REWARD OF AK

The part of AK mining overflow will be 100% feedback global AK node, equivalent to "re-mining"!

Because the individual AK mining coefficient is less than 100% and the CXC annihilation mining double peak power cap overflows the excavated AK, all enter the AK circulation bonus pool, and divide the bonus pool daily according to the proportion of individual computing power.

· Total number of AK awards in the circulation bouns pool =
Sum of AK infinite mining overflow number of all nodes in the network + sum of AK generated by double-peak power overflow of CXC annihilation mining of all nodes in the network

· Number of individual awards =
AK circulation bouns pool × individual AK computing power ÷ AK computing power of whole network

AK circulation bonus pool awards are distributed with AK mining proceeds.

LUCKY BONUS POOL

Network contribution lucky award, further guarantee CXC public blockchain stability, security and decentralized experience:

Each block weak is one season, and the double peaks power is capped every season due to the annihilation of CXC. The CXC excavated from the overflow part will enter the LUCKY bonus pool. The bonus ceiling for each season is 50,000 CXC. ≤10,000 users will be randomly selected from the first 50,000 addresses of the CXC-PC wallet opening time and will be equally divided into the CXC of the LUCKY bonus pool.

As a distributed network service structure, keeping the PC wallet node online can provide information transmission and network services for CXC network users, improve the stability, security and synchronization efficiency of the CXC network, and lay a foundation for carrying more services in the future system.

At the same time, 1%-10% of AK that overflowed due to CXC annihilation double peak power capping enter the AK cycle bonus pool every season, and the bonus pool is divided daily according to the proportion of individual AK computing power.

AK INFINITE MINING FORMULA SUMMARY

AK personal mining income =
Proportion of personal computing power in the whole network * Infinite AK mining coefficient * Total AK production of the day * （80%-98%）

AK personal computing power =
Coin holding computing power + double peak computing power + invitation computing power + coin holding time computing power

Total network computing power =
Sum of AK personal computing power

AK infinite mining coefficient
Determined by the number and level of annihilation mining of CXC

Holding power
AK = 1 computing power, calculates the holding power of the coin according to the AK holding amount

Double-peak computing power
Same as the original CXC mining, the double-peak structure is adopted. The smaller value of personal AK computing power of Ice peak and Green peak * the bonus coefficient of AK double peak computing power, then apply the capping rule of 30 times the holding power to get the final value.The cap value is 30 times of AK's token holding computing power, and the maximum cap value is 30 times of 50000 AK's computing power, is 1.5 million. As the computing power of AK double peaks overflowing from the cap is cleared, it will no longer affect POA mining.

Invitation computing power
Each CID will be rewarded with X% of AK's coin holding computing power of the invited CID, and X% is the corresponding AK bonus coefficient of the invited computing power.

Holding time computing power
If you hold AK currency continuously for 30 days, the currency holding duration will be calculated based on the lowest currency holding computing power *30% within 30 days. Daily random snapshot of currency holding capacity, and daily statistics of the lowest currency holding computing power within the first 30 days.

SUMMARY OF AK MINING AND CXC MINING

ENDLESS EVOLUTION

Model comparison	Original CXC mining	AK Mining Evolution

Special ability		Entrance tickets and catalysts for participating in AK Infinite mining (correspondence coefficient 50%-100%)		The lowest entrance ticket to participate in AK Infinite mining (correspondence coefficient 35%)

CXC Annihilation mining：At the same time, the addition coefficient of AK double peaks and invitation computing power are determined.

AK

INFINITE MINING

1-10% AK CAN BE MINED FREE OF CHARGE THROUGH THE BTC SOUL CONTRACT.

1-%10% AK MORE CXC CAN BE MINED THROUGH CXC ANNIHILATION MINING.

80%-98% AK CAN BE MINED THROUGH AK ITSELF.

AK

CXC

AK-BIT COLLISION

EXPLORE MORE

AK-BIT COLLISION

The initial release of CXC was successfully completed in the form of bit collision, successfully retreated before AK came on line, with the remaining 190m CXCs in the pool being transferred to Satoshi's Bitcoin Creation Address for permanent storage, equivalent to approximately 6% of the total token destroyed at one time.

From then on, CXC will no longer be bound by the rise and fall of Bitcoin, and its value will be determined entirely by the size of its ecological development and the secondary market, and this will soon be booming. At the same time, after the AK and other ecosystem projects are launched, the demand for CXC across the whole network will continue to surge. The only way to obtain CXC conveniently and in large amounts will be to purchase from the exchange. The situation of demand exceeding supply will increase the value of CXC's currency holding.

Now, the original release of AK will be completed through the improved gemini collision module:
AK BIT COLLISION & AK LUCKY COLLISION

＜5300 BTC

The total amount in the collision pool is 10 million AK, of which 5.5 million are used for AK bit collision (colliding AK through BTC) and 4.5 million are used for AK lucky collision (colliding AK through AK play).

The earlier you participate in the collision, the more AKs that are produced

THE SIGNIFICANCE OF AK BIT COLLISION

Long-term strengthening of global ecological technology

AK's increased operating income is used to continuously upgrade the configuration and scale of CXC Global Ecological Super Node (Distributed Server Cluster) for a long time, so that CXC can eliminate the network blockage phenomenon of BTC, ETH, EOS and other public chains, thus laying a more solid technical foundation for the intelligent contract chain of the DAPP, and even for the whole network chain. This will allow the CXC ecosystem project group to maintain the leading operational efficiency and user experience of the whole network, and provide technical support for super-large-scale commercial application chains like Amazon.

De-centralized chain storage

AK's incremental operating income lays a hardware foundation for secure, private, cost-effective global decentralized chain storage.
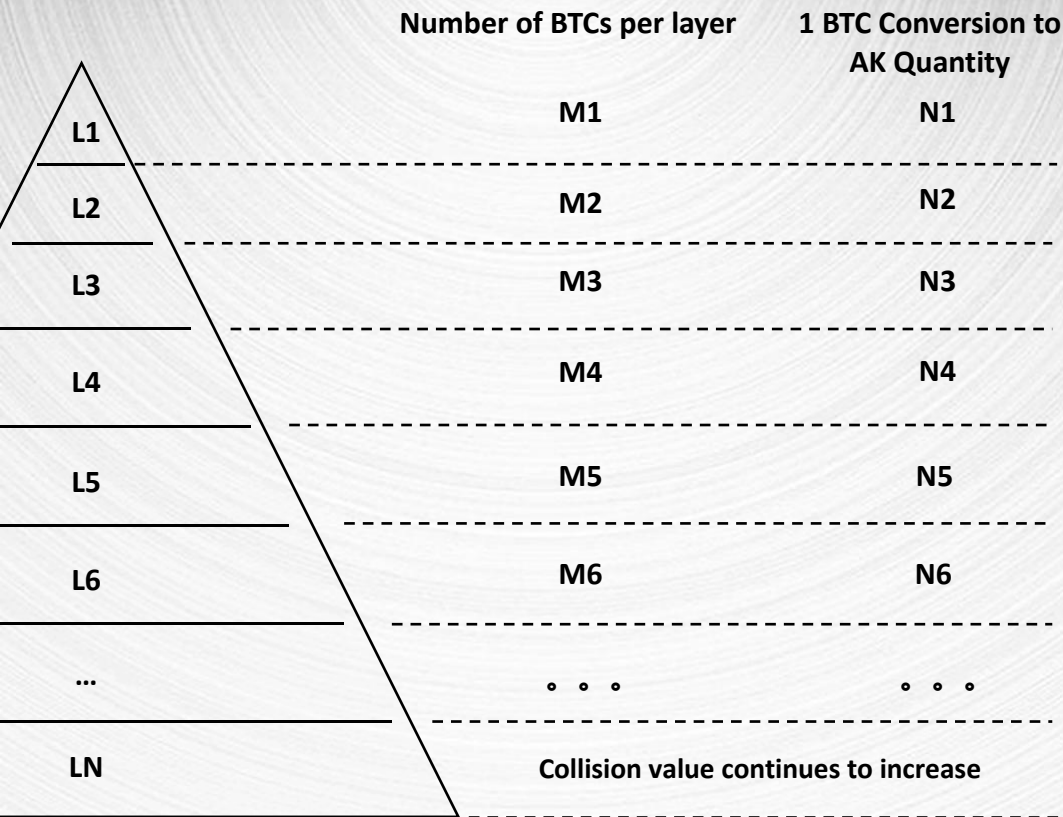

Irregular repurchase

AK's incremental operating income has periodically repurchased CXC in major global transactions, continuously reducing market circulation and continuously increasing the value of its currency.

Creating another starter opportunity

Enabling the massive market players who missed CXC collision and were in the wait-and-see phase to have the opportunity to participate in their first project.

THE RULE OF AK BIT COLLISION

	Number of BTCs per layer	1 BTC Conversion to AK Quantity
L1	M1	N1
L2	M2	N2
L3	M3	N3
L4	M4	N4
L5	M5	N5
L6	M6	N6
...	° ° °	° ° °
LN	Collision value continues to increase	

Bit collision is the first collision value increasing system in CXC public chain. The full name of the system is continuous value-added collaboration.

Participating in the bit collision is like using BTC for enterprise equity investment. From seed to angel to ABCD round, the project valuation is constantly improved until the release is completed. After that, the value of AK is determined by the global secondary market.

The collision model is a finite-level triangular structure. Each layer contains a certain amount of convertible BTC. The number of layers consists of the total amount of BTC put into collision by the whole network. The top L1 layer can contain M1 BTC and per unit BTC convertible N1 AK. L2 can accommodate M2 BTC quantity, per unit BTC convertible N2 AK quantity... and so on, m increases step by step and n decreases step by step.

When participating in the collision, after the BTC of each layer has been exchanged, AK will be exchanged at the exchange rate of the next layer. This process is irreversible. In the collision system, AK will obtain continuously rising exchange value, that is, the later participating in the collision, the higher the exchange rate, the higher the AK price, and the higher the exchange cost.

AK BIT COLLISION LEVEL PARAMETERS

According to the formula, the actual cumulative investment of BTC that hit 5.5 million AK is ≤5300 BTC.

Initial price of collision ($)	Price after Collision ($)	Average Value of Collision ($)	Number of Collision Pool Layers	Total number of Collision BTC	BTC Estimated Price ($)
$4.42	$7.71	$6.36	23	5277.35	$6,629

AK LUCKY COLLISION

MORE FUN COLLISION FORM

When the original CXC bits collide, the user can choose whether the collision is scattered to the left domain or the right domain, thus having a 50% chance of obtaining 110% CXC.

AK will be upgraded on the basis of this rule. Users can use the existing AK to carry out lucky collisions and judge the results according to the odd and even hash mantissas, thus having a 50% chance of capturing 200% AK.

* Bit collision will open before lucky collision, and lucky collision will open in due course.

100%

Discount to bottom, 100% Return

BTC, which from AK's collision pool, is rewarded by inviting competitions per week 100% Reward CID Direct Inviter

PROMOTING THE HEALTHY DEVELOPMENT OF CXC ECOLOGY

CID is the identification of CXC community identity and has barrier-free access and asset exercise power in CXC network and DAPP. Its rights and interests include but are not limited to mining revenue, invitation revenue, competition revenue, eco-sphere airdrop/operation revenue, honor and prestige level, one-click login to eco-sphere DAPP, etc.

In the future, CID will become a valuable virtual identity commonly used in block chains and the Internet, and become a value measure for its owners and users.

With the continuous growth of system users, CID will also have various service privileges inside and outside the CXC ecosystem and be widely used in the Internet and even the real economy.

PARAMETER	CXC	AK
Total circulation	About 3.114 billion	**0.3 billion**
Number of collisions	About 0.031 billion	**0.01 billion**
Production mode	Cut production by 50% every five years	**Cut production by 18% every 90 days,** equivalent to 97.7% reduction in the fifth year
First round difficulty Daily mining volume	0.72 million	**0.25 million**
Fifth year difficulty Daily mining volume	0.36 million	**About 5700**
Total amount of mining in 5 years	1.31 billion	**0.122 billion**
BTC Soul Mining	no	**yes**

Looking at the industry, CXC is already a public blockchain with a good balance between inflation and holding value..

The total amount of AK issued is only 1/10 of that of CXC;
The amount of mining in 5 years is less than 1/10 of that of CXC;
In addition, the original BTC soul mining has injected potential energy into AK industry.

We have a positive expectation of AK's value enhancement. At the same time, we are full of expectation for the annihilation mining of CXC and the value enhancement of CXC integrated into AK system.

THE WHITELIST OF EXCHANGES

As long as the exchanges launch the token, each one will reward 4000 AK.

Necessary audit conditions for whitelist:

1. Opening AK trading, recharging and withdrawal dates must be ≥7 days;
2. Able to dock quantitative robots, with not less than 20,000 AK;
3. The difference value of the first order of deep trading cannot be higher than 3%;
4. The depth of buying or selling orders shall be ≥1000 coins in total for 10 orders and ≥2000 coins in total for 20 orders according to the number of orders displayed by the exchange.
5. The exchange needs to complete at least one bidding operation of CAD advertisement system in CXC public chain wallet APP.

After the above conditions are met, awards will be issued within one season after the review.
