

CENTER — COIN

Empathy is a critical part of our lives that it is also defined as 'the oxygen for our emotions'. It enables us to understand others and connect with others. Without empathy, it will lead our lives to social isolation and dissatisfaction of our lives.

CenterCoin(CENT) is a project on this subject.

One of the worries that most virtual asset investment holders have is when they realize that the virtual assets they invest in are zero-value, with no places to be used. This hinders the culture awareness of virtual asset investment and adds a negative gaze to the virtual asset and blockchain industries.

As such, [CenterCoin Re-Birth Project 3.0] began with the problem of the valuelessness of existing virtual assets. In other words, it is intended to implement the real business implementation of the holder, project, and token economy through two keywords: [real life payment and profit sharing]. Empathy is sharing of the feelings and the experience of others. The ultimate goal of [CenterCoin, CENT] 3.0 is to build a real-life payment-based token economy where holders and projects can coexist and grow continuously without following the bad examples of many existing virtual asset projects.

With the popularization of the cryptocurrency and as the cryptocurrency wallet emerges as the indispensable tool, the market of the cryptocurrency wallet is rapidly expanding.

Competition is also accelerating among companies seeking to lead the cryptocurrency wallet ecosystem in the 'easy payment' market where users pay with their mobile phones instead of credit cards or cash. Now the world is coming to an era of genuine change in the payment market through the blockchain technology.

Cryptocurrency/Virtual Asset, which originate from BitCoin, has evolved from being considered an item to culture in itself, with the passing of 'ACT ON REPORTING AND USING SPECIFIED FINANCIAL TRANSACTION INFORMATION' in Korean legislation.

Center Coin 3.0 is in a lot of preparation and implementation phase to act as a leader in the evolving market situation.

Cryptocurrency is advancing beyond the boundaries of the exchanges to the world of real economy. It is not merely used as a means of speculation but as a means of payment or a means of trading. It is no exaggeration to say that there is a coin war going on, not only in the world, but also in Korea, which is one of the major players of cryptocurrency. In a few years, several thousand cryptocurrencies have been created.

However, if we cannot use it in real life, can we say that it is money?

What are the requirements of cryptocurrency for it to be used in real life?

First. Are there enough affiliated stores that can be used in real life?

Second. Does it have a secure and fast settlement speed?

Third. Can you have stability in preserving and increasing your property?

Fourth. Can you secure reliability from risks such as hacking and forgery?

If so, how is the value of the currency measured? There should be many places to use it.

If there are many places to use it and once it becomes established as a means of a new key currency, it will maintain a stable stance.

CenterCoin is not simply a coin to buy and sell at exchanges but it uses an Ethereum algorithm to link stability and Ethereum-based smart transfer functions. Seeking to differentiate itself from other coins, it emphasizes transparency by using the real name of users, in contrast to the anonymity of existing blockchain and provides services where users can directly use the blockchain in real life.

CenterCoin can be used for payments at various center coin partnering stores and the products at partnering stores, scooter rental, and mobile products etc can be purchased through other coins such as Bitcoin (BTC), Ethereum (ETH), Ripple (XRP) that are stored within the Centercoin wallet.

02 Background

CenterCoin Background

2-1 Blockchain Enters Into Market in Full Scale

Global advisory group Gartner has selected the blockchain for the third consecutive year as one of the top 10 promising technologies since 2017 and the Market Report Center forecasted that the blockchain, which has formed a market size of about \$700 million in 2018, will grow to \$60.7 billion by 2024.

Compound Annual Growth Rate (CAGR) of arising technologies of 4th industrial revolution

The average annual market growth rate (CAGR) of the blockchain is also very high compared to other technologies such as AI, cloud, and Internet of Things (IoT) that are leading the fourth industrial revolution.

Market research firm Markets and Markets predicted that the average annual market growth rate (CAGR) of the blockchain would reach 80.2% by 2018-2022. Given that the CAGR of AI is 26.62%, the cloud is 17%, and the Internet of Things (IoT) is 50%, it seems that the world's expectations on the blockchain would increase further.

According to data, government support for the blockchain has steadily increased. Hence, it is expected that the integration of the blockchain in different industries will expand more rapidly. The third generation of the blockchain has developed to suit business applications beyond the financial sector. Diversification of algorithms, improvement of transaction processing speed, and support of various development languages are typical characteristics of the third generation of the blockchain technology.

Meanwhile, the emergence of a "service type block chain (BaaS)" that can receive the resources required for the development of the blockchain from the cloud is also strengthening the approach of implementing the blockchain services.

Starting with Microsoft, which first launched BaaS in 2015, IBM introduced BaaS in 2017, followed by Amazon, Huawei, and Alibaba in 2018. KT plans to launch BaaS this month for the first time in Korea, which is expected to boost the industry integration of the blockchain technology this year.

2.2 Cryptocurrency Wallet Market Expands Rapidly

With the popularization of the cryptocurrency and as the cryptocurrency wallet becomes an essential tool,

the market of the cryptocurrency wallet is rapidly expanding.

In the real world, there is an increasing number of services that can be settled with cryptocurrency. Crypto-currency, which was limited to Bitcoin and Altcoin (coins other than Bitcoin), has expanded into a 'Security Token', digital asset with traditional assets as collateral, and using cryptocurrency as investment techniques is now in full swing. Competition among companies that want to lead the ecosystem of cryptocurrency wallets is also accelerating as they need to store and manage utility tokens used for each service, as well as making it possible for simple payments and remittance, in order to utilize real-life blockchain services such as various apps (dApp. distributed applications), and not just the cryptocurrency exchanges.

Service provided for KakaoTalk's cryptocurrency wallet: Klip

Through its popularity, Korean messenger Kakao Talk is offering a new cryptocurrency wallet Klip service that can safely and conveniently manage virtual assets. Klip forms its ecosystem through association with the blockchain platform Klaytn, and has partnerships with various Dapps in finance, games, SNS, etc.

Cryptocurrency trading and investment such as Crypto Fund also require wallet

The blockchain cryptocurrency industry, like 'Alipay' that led the fintech industry, has come up with an observation that the cryptocurrency wallet will be a crucial means of investment technique in the future. Ant Financial, a subsidiary of the Alibaba Group, is investing the money, which users have put into Alipay accounts for mobile payment and transfer, into money market funds (MMF) to provide them with higher interest rates

than commercial banks. In connection to this, Goldman Sachs, the global investment bank, said it is preparing a custody service to store and manage cryptocurrency on behalf of their investors and the global crypto-currency exchange Coin Base and Bitgo also offer custody services in the form of a three-party trustee.

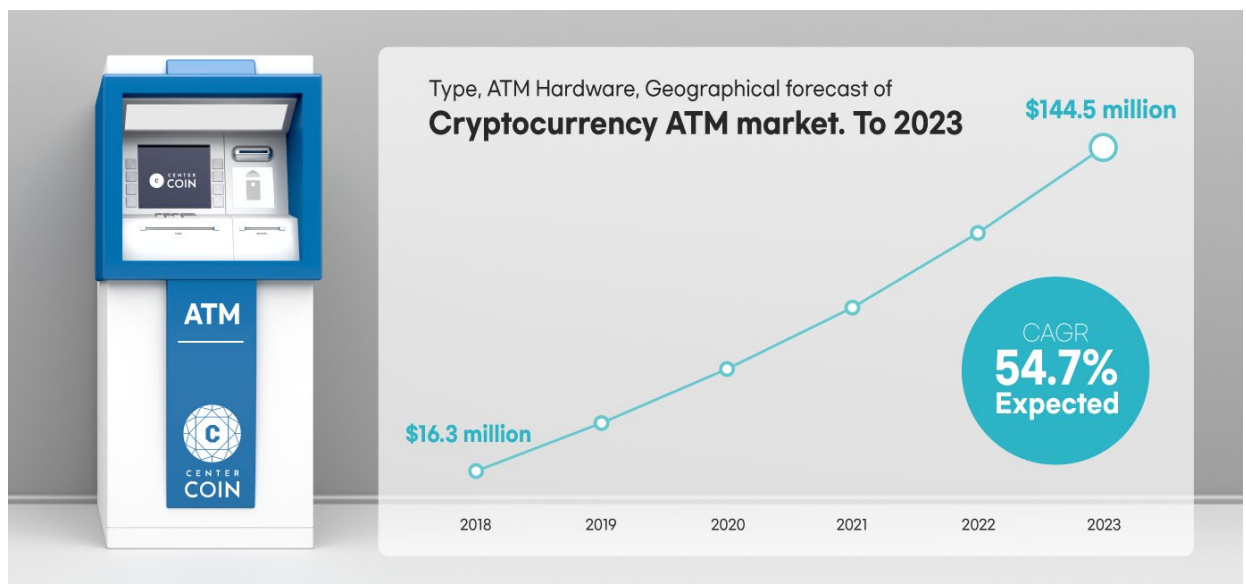

If the cryptocurrency is not only traded as a stock but a market where it is circulated as financial instruments

such as funds, deposits, and loans, is formed, users can conveniently select a cryptocurrency financial instrument according to the risk and expected return. This will then be an era where cryptocurrency performs a role of a 'decentralization bank' where users can purchase any kind of cryptocurrency without being limited to a specific exchange.

2.3 Cryptocurrency ATM Market

There have been analyses predicting that the market for cryptocurrency ATM will grow to about \$ 144.5 million (202 billion won) by 2023.

Global market research company Research & Market recently published its "Type, ATM Hardware and Geographic Cryptocurrency ATM Market - Global Forecasting by 2023" and forecasted that the global cryptocurrency ATM market worth \$16.3 million in 2018(CAGR) will grow 54.7 percent annually to \$144.5 million (160 billion won) by 2023. Research and Market report analyzed that the key growth driver of the cryptocurrency ATM market will come from two-way cryptocurrency ATM, which is characterized as a device allowing users to cash out their cryptocurrency using a single ATM. The report predicts that this feature will be popular among users

The report also pointed the increased use of cryptocurrency in major industrialized countries such as the United States, Germany and Japan as another growth factor.

However, uncertain circumstances regarding regulations and lack of technical understanding of cryptocurrency are expected to limit the growth of the cryptocurrency ATM market.

By region, North America is expected to form the largest market for cryptocurrency ATMs by 2023, and especially the United States, is expected to dominate the cryptocurrency ATM market based on the hardware and software delivery capabilities of these devices and the favorable investment environment.

On the other hand, traditional ATM operators see the growth of cryptocurrency ATMs as a threat to their business. The annual report by Cardtronics, one of the largest ATM operator, points out that cryptocurrency is a major threat to current ATM business, analyzes that consumer use of ATMs is decreasing because consumers prefer electronic payment methods over the conventional payment methods.

Introduction

CenterCoin Introduction

3.1 Why Must It Be CenterCoin?

1) Maintains Cryptocurrency Payment Networks

① Scooter Service

CenterCoin Wallet supports the payment service for 'Rewardable mobility sharing service Hi-Kick Scooter platform' usage.

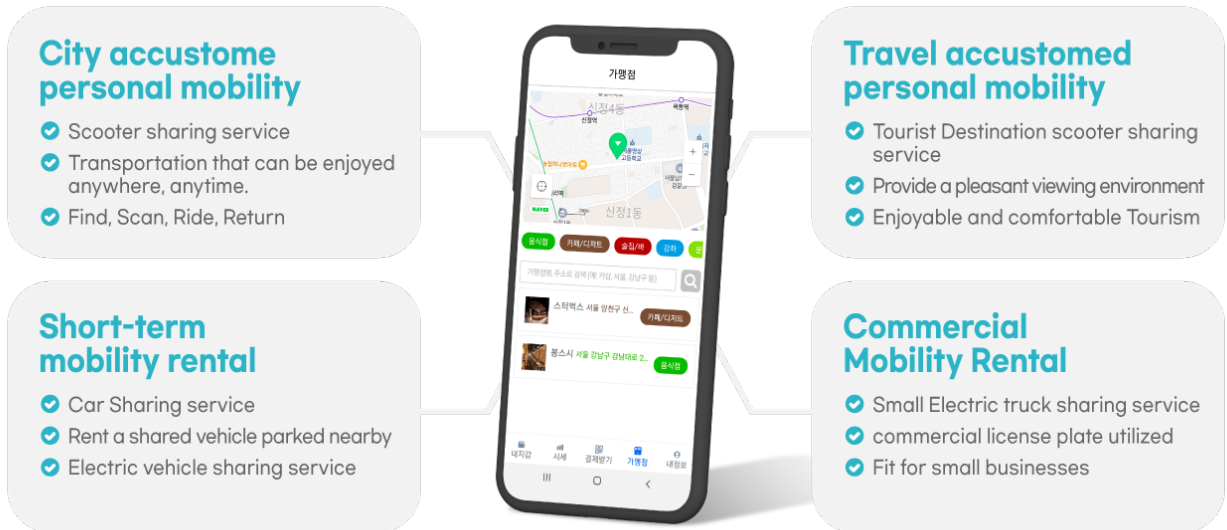

In addition, Center Coin (CENT) rewards the user with the Center Coin (CENT) token in proportion to the driving distance when using a shared scooter in 'Hi Kick'.

In other words, by providing center coin (CENT) rewards for scooter activities, users are provided with an incentive to use "Hi Kick Scooter", an eco-friendly transportation method.

In addition, the mobility sharing service platform 'Hi Kick' registered in the blockchain network utilizes GPS, RPM, GYRO, and IoT functions to generate complex information and transmit the data to the system. Blockchain records and verifies the transmitted data, and pays the center coin (CENT) as a reward for the action.

Furthermore, big data generated through deep learning based on the contents will be used for various additional creation activities through the use of artificial intelligence (AI).

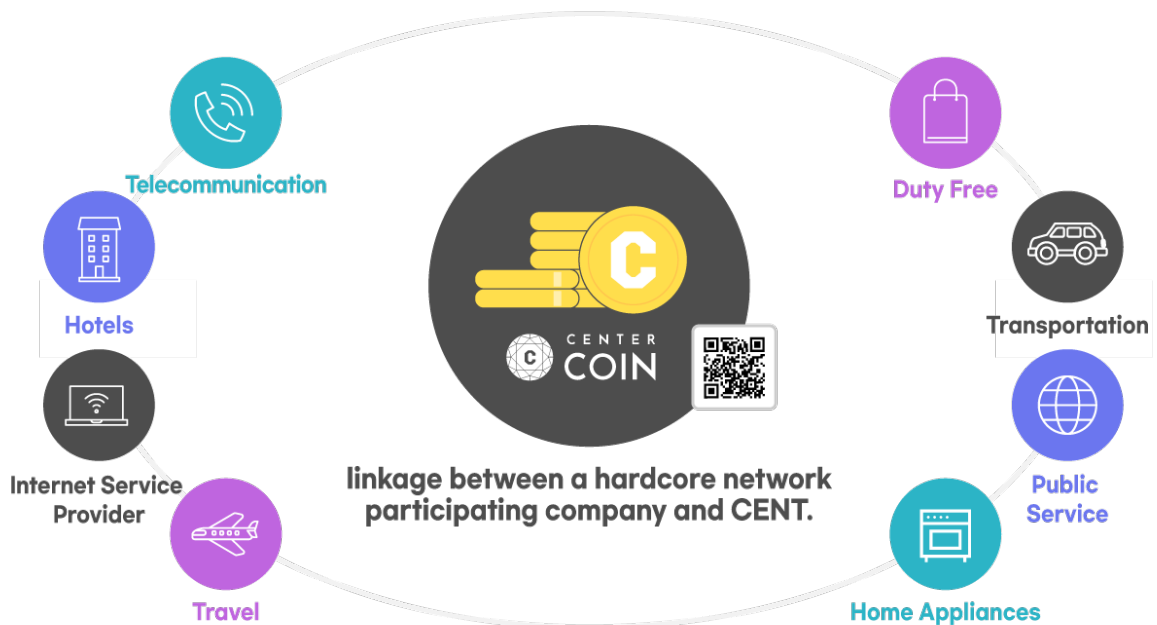

[Rewardable mobility sharing service Hi-Kick Scooter platform available]

② CenterCoin Partnership/Affiliation

As Korea's only blockchain franchise business leader, we are in the process of participating in a franchise partnership through the linkage between a hardcore network participating company and CENT.

Affiliated/partnering stores have established a convenient payment with supporting QR code. By providing signs indicating they take centercoin, the partners will contribute in expanding the ecosystem and providing easier access for holders to find the partnering stores.

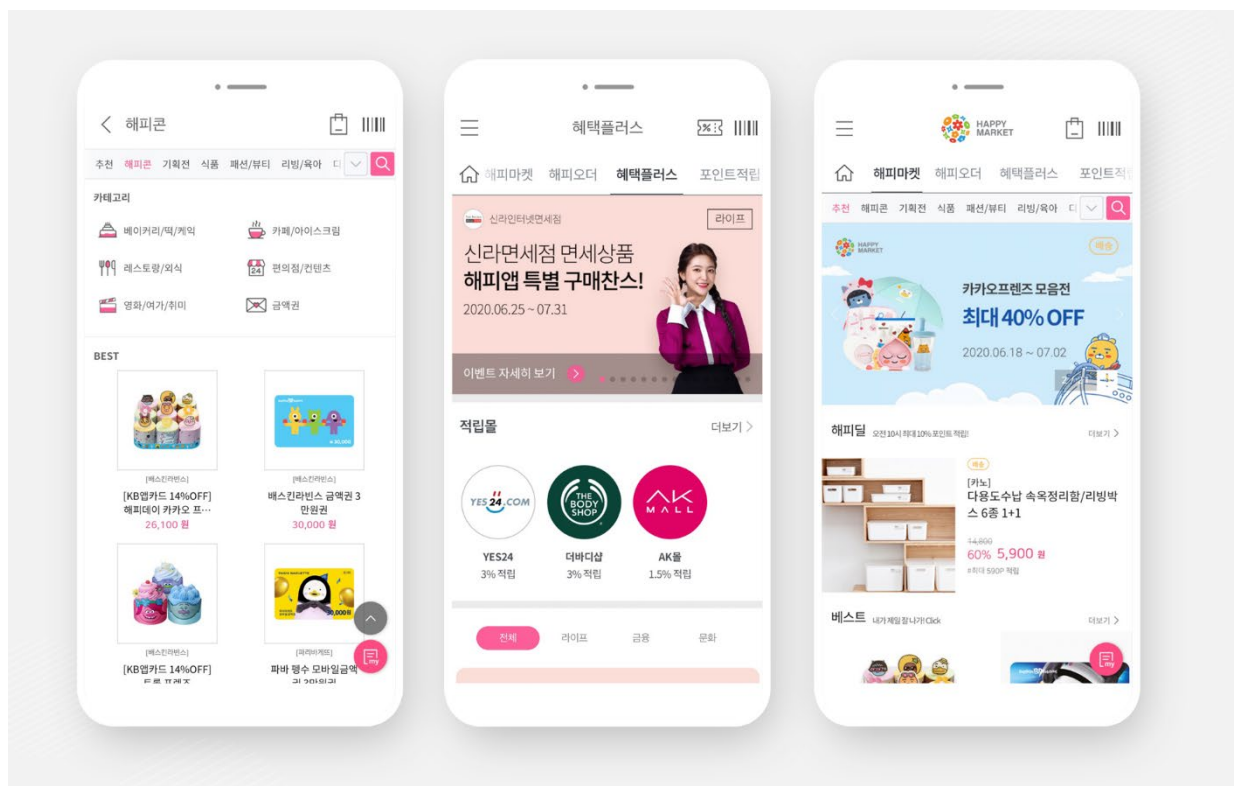

[Examples of 'CenterCoin Affiliation Sign']

Merchant's product purchase service is provided by CenterCoin Wallet.

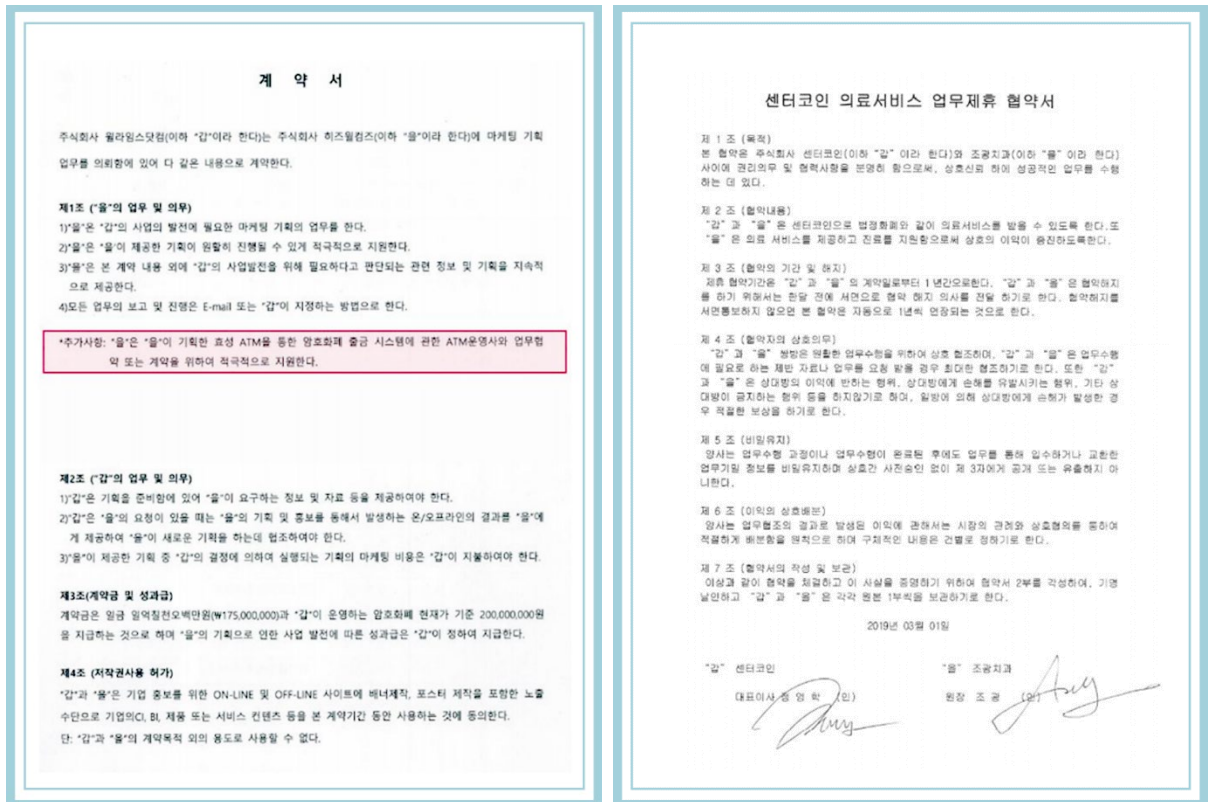

③ Mobile Products

Service is under preparation for mobile product purchase through centercoin wallet.

④ Alliance with Hyosung TNS

We offer free cash withdrawals for our users at over 13,000 convenience stores nationwide, (e.g. GS24, Ministop)

[Image of contract for cryptocurrency withdrawal service through Hyosung ATM]
& [Medical service cooperation agreement]

⑤ Medical Service Business Agreement

We provide medical products such as plastic surgery, dental care and other medical services via CenterCoin.

⑥ Partnership with Sejong Life

We have built a system that makes it easier for members to register for mutual aid and pay premium using the CenterCoin. Accordingly, it is possible to make payments for the wedding and cruise travel products of Sejong Life's high-quality mutual aid service with CenterCoin.

[CenterCoin Affiliation Business Model Briefing]

3) CenterCoin that Integrates with Real Life to Accelerate the Popularization of Blockchain

One of the biggest issues in the block chain is the emergence of services connected to daily lives. For block-chain services to be fully integrated in real life, securing stable and convenient payment solu-tions and a wide range of affiliated partners where the coins can be used in real life is an essential pre-requisite.

CenterCoin, which is considered as a solution for solving problems of existing cryptocurrency such as long-time delay, high transaction costs, and failures in contracting, is gaining recognition as a coin with high real-life utilization value through the blockchain technology security, stability and conveni-ence.

In recognition of the stability and convenience of the CenterCoin, we have absorbed the advantages of cryptocurrency and overcome the shortcomings of cryptocurrency as a means of payment to secure various affiliated partners through physical currency, which is beyond cryptocurrency.

CenterCoin offers the service of cash withdrawals at over 13,000 convenience stores nationwide In addition, we have entered into agreements with alliance shopping malls, duty free shops, luxury goods stores, travel and medical sector, and have completed the construction of infrastructures to enable users to immediately use the cryptocurrency of CenterCoin.

The center coin, which can be converted to real money directly through the above infrastructure, and its value are expected to increase along with the increase in the number of users and their demand.

3.2 Overview of CenterCoin

CenterCoin aims to provide users with an optimized cryptocurrency payment service through its large network of online and offline affiliated partners and to construct a coin ecosystem dedicated to de-centralized commercial payments where users' payment information is stored in the blockchain.

Payment

- ✓ CenterCoin Wallet
- ✓ Distributed Data System
- ✓ AI Program for automatic transfer
- ✓ IoT incorporated location

Alliance Network

- ✓ Over 13,000 ATMs nationwide in convenience stores
- ✓ Real-life transaction service
- ✓ Wedding, travel, hotel, hospital

Data

- ✓ User Data
- ✓ User Transaction Data
- ✓ User Community Data

04 Solutions

Eco-System Solutions

4.1 PAYMENT

1) CenterCoin Wallet

CenterCoin Wallet, an easy and safe center wallet, is simply and concisely designed which makes it easy for users to use and has been developed to satisfy even the most advanced users.

- **Ease of use** : Registration or signing up as a member is fast and easy, and users can receive help from the support center whenever it is needed.
- **Safety** : All information necessary for accessing the CenterCoin is securely stored on the user's device.

With industry's leading hardware encryption, the user's money is secure even when the mobile phone is lost.

[MNEMONIC CODE SERVICE]

The risk of loss for the assets stored in the wallet are reduced by providing 'Mnemonic Code Service'

2) Distributed Data System

It is a system based on Ethereum platform. Data system involving multiple blockchain nodes. The biggest feature is that there is no center node. Therefore, it can not be modified or falsified. Since there are tremendous amount of nodes involved, it is one big book with its own trust mechanism.

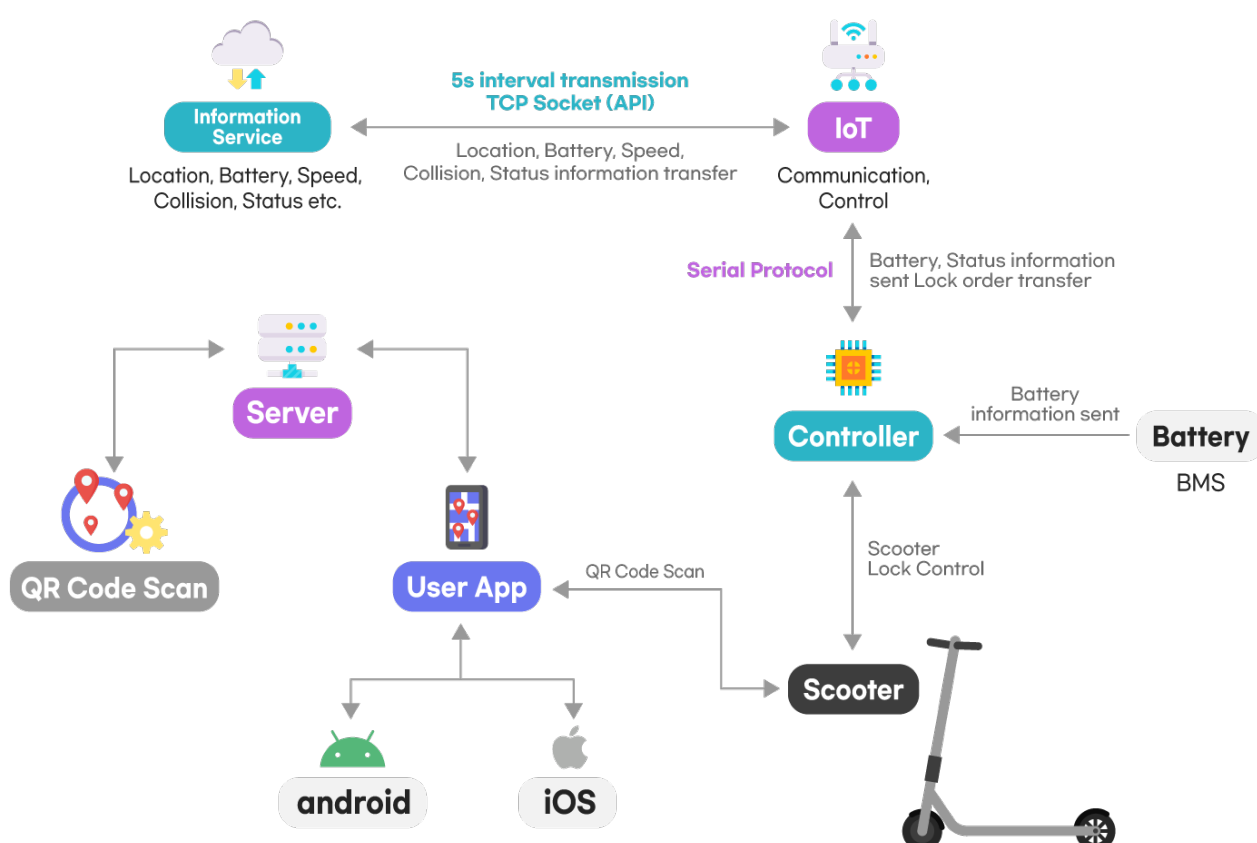

In fact, CenterCoin ensures transparency and outstanding privacy. The information processes stored in our blockchain are all transparent and data access is also the same. In addition to blockchain, the encryption method is built into the system to ensure that personal information is fully protected.

Stored customer data is accessible only by the third party that the customer has granted or to the authorities in case of an accident. The CenterCoin is a distributed type, meaning that there is no single control center in all layers. All data and codes are maintained and executed on the basis of each node.

CenterCoin has a flexible API that allows subscribers to easily integrate their systems into CenterCoin.

3) Location Service incorporating IoT

Members can easily access information about the scooter, such as the location of the nearest scooter's GPS, the remaining battery power of the scooter and the damage status of the product through real-time linkage between the controller installed on the scooter, IoT (communication, control), and the user app.

Furthermore, by analyzing the location data of the scooter and the affiliated store incorporating IoT technology in the future, We plan to expand to various real economic business areas such as advertising.

4.2 ALLIANCE NETWORK

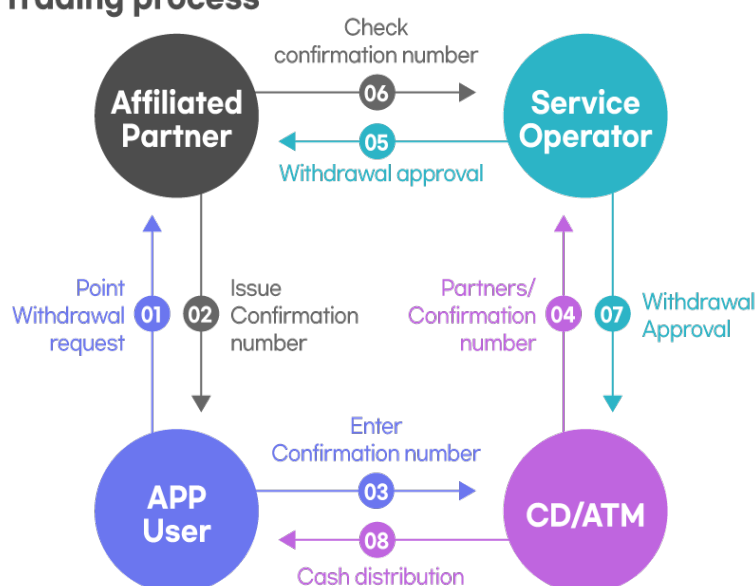

1) Cryptocurrency Cash Withdrawal Service Using ATM

It is predicted that the global ATM cash market will grow exponentially at a compound annual growth rate (CAGR) of 46.6% by year 2024.

According to Bitcoinist, an online cryptocurrency specializing media, Research and Markets, a market research platform, stated in its Cryptocurrency ATM Market Report that the world's cryptocurrency ATM market grew at an average annual rate of 46.6 percent, predicting that it will reach up to \$ 183.78 million.

As the number of services that enable cryptocurrency to be used in real life increased, the rise in demand of the cryptocurrency ATM is the growing factor behind. The existing cryptocurrency ATM market has a high share in North America and Europe, but it is predicted that the market will shift with the rising demand in the Asia-Pacific region.

Trading process

Affiliated ATM

Affiliated Partner	Hyosung TNS
Typically installed locations	GS25, Ministop
Number of Installed machines	13,000 (Withdrawal transactions)

CenterCoin has partnered with Hyosung TNS to provide a service where affiliated members can withdraw or deposit their cryptocurrency, points, bank account balances, and loans through the ATM in 1,300 convenience stores nationwide.

Cash withdrawal can be conducted by authenticating a one-time password issued through mobile.

2) Real-life Commerce Payment Service

CenterCoin will make it possible for users to purchase products through partnerships with offline companies.

Payment will be possible with various coins stored on the centercoin wallet for necessities through affiliation and partnerships at restaurants, cafes, culture centers, accomodation etc.

Real-life transfer/transaction service

Why CenterCoin Wallet?

Centercoin partners will provide token economy expansion in which other virtual assets affiliated with centercoin may also be used for payments, which ultimately leads to the globalized expansion of the transaction system for Centercoin wallet.

In particular, payments are possible with trusted major virtual assets such as Bitcoin (BTC), Ethereum (ETH), and Ripple (XRP).

The fee from the payment will be used to finance the center coin's holder-friendly policies such as buyback and airdrop..

Currently, we are continuing to increase our agreement with the leading major virtual assets.

3) Game Market Item Trading Service

The transactions for all products that used the CenterCoin as a means of payment are recorded and it is paid as a compensation for verifying this record. It is an environment where game users participate in the verification of the blockchain just by running the games and are rewarded in return.

It is a mere addition of verification into the game system, but the result is immense. The game user can use the acquired CenterCoin as a payment means for acquiring all the products and services in the game. Moreover, they can use it as a payment method for all products and service sellers participating in the time-play environment.

Since CenterCoin immediately compensates for the time spent by the game user with coins, it provides a more powerful incentive for use than the compensation systems such as credit card points and airline mileage, which are incidentally acquired as rewards for the use of real money in IT services and various service areas.

Notably, this can overcome the limitations of the mileage system where one had to increase the payment amount in order to accumulate the mileage or points.

Game users earn CenterCoin through the following steps

- **Game access** : Confirmation of game user information, acquisition of electronic wallet address, start of measuring usage time, verification process
- **Game usage period** : Measurement and verification of time (mining), Checking of real time information
- **End of game** : Acquisition and distribution of coins, sending coins to game user information and electronic wallet address

Of these, the information about game usage time is the most important part in relation to the game use, and this can be beneficially utilized by game developers and game service providers when they analyze data about gaming retention and customer loyalty.
