

1. What is DeFinition

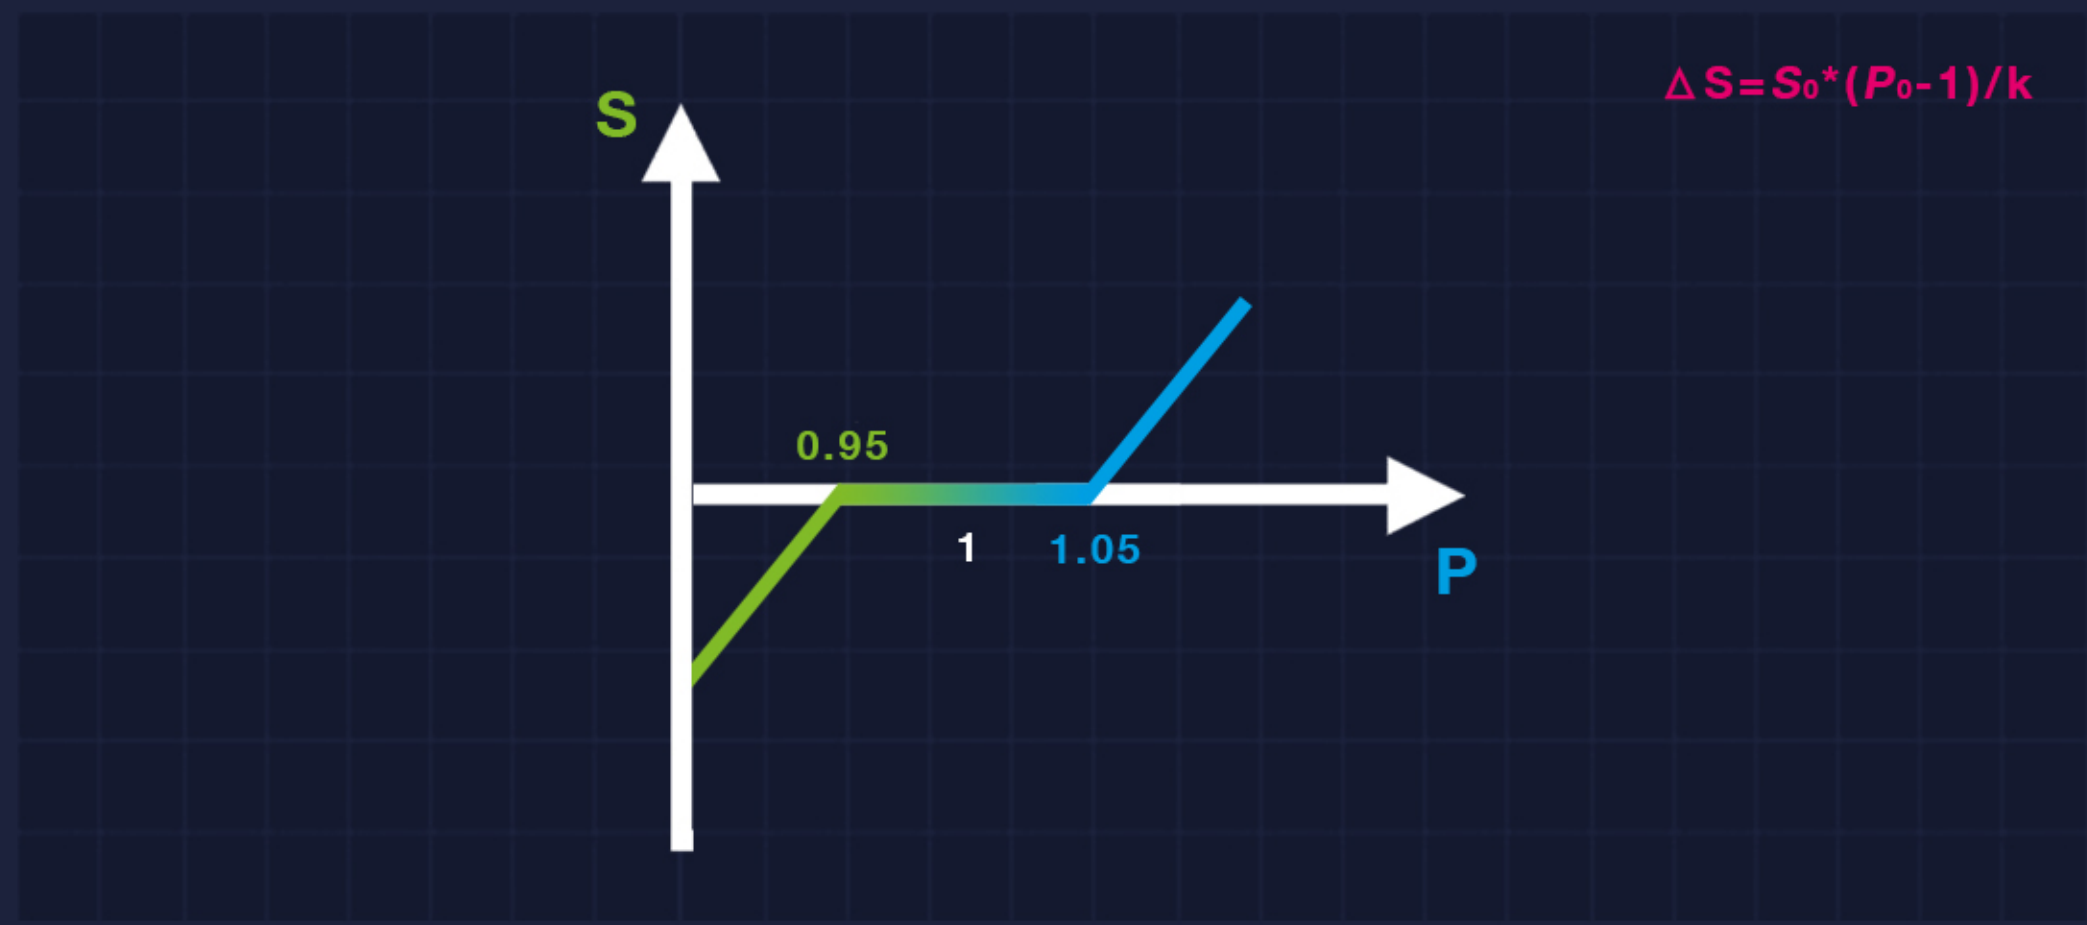

DeFinition.network is a resilient supply token on TRON blockchain. As the name of DeFinition, its goal is to redefine DeFi. Nobody knows it will be either to the moon or to the abyss. But if DeFinition becomes a stablecoin with a huge market value in the future, it must be attributed to the community.

2. Resilient Supply Mechanism

-Supply Adjustment Strategy

Token supply will be adjusted according to the price of its token DZI automatically, the rule is to adjust the token balance to achieve the goal of stabilizing the price at around 1 USDT.

When the price is higher than 1.05 USDT, the token will inflate, and all the token holders will receive dividends, the token quantity will increase; when the price is lower than 0.95 USDT, the token will be deflation and the holders' token will be reduced. When the price is in the range of 0.95 to 1.05 USDT, the number of tokens will remain.

- Reaction coefficient

Every adjustment will get an adjustment coefficient based on the price difference. We initially set a reaction coefficient of k=10, so that the adjustment range of the token supply is only 1/10. You can also consider that we do not want the price to be very violent fluctuations, causing the entire system to collapse. We hope that changes will happen slowly and just achieve market demand.

- Adjustment formula

$$\Delta S = S_0 * (P_0 - 1) / k$$

ΔS: daily supply change

P₀: Price of the previous day

S₀: the previous day's supply

k: Reaction coefficient, we initially set k=10

-Supply period

The adjustment of the supply volume will be carried out once a day at a random time. In order to prevent arbitrageurs from controlling prices before and after the supply adjustment, we will take a random time from 0:00 to 24:00 UTC every day. The amount of supply adjustment will be determined by the price of the previous day.

3. Project Highlights

-Based on TRON network

DeFinition is developed based on TRON blockchain. TRON network has extremely fast computing speed and extremely small gas transfer costs. And TRON network also has the largest supply of stablecoin outside of Ethereum blockchain, with USDT reserves of up to \$3.9 billion. This will give players a better experience when participating in DeFinition network.

-Relative fairness

Games like Ampleforth are very popular on the Ethereum blockchain. But players cannot get a fair starting line because of the different prices of different rounds. DeFinition will reset everything and all players will get DZI for 1 USDT and launch on AMM DEX with a starting price of 1 USDT.

4. Initial Token Distribution

Token symbol: DZI

Total supply: 2,360,000

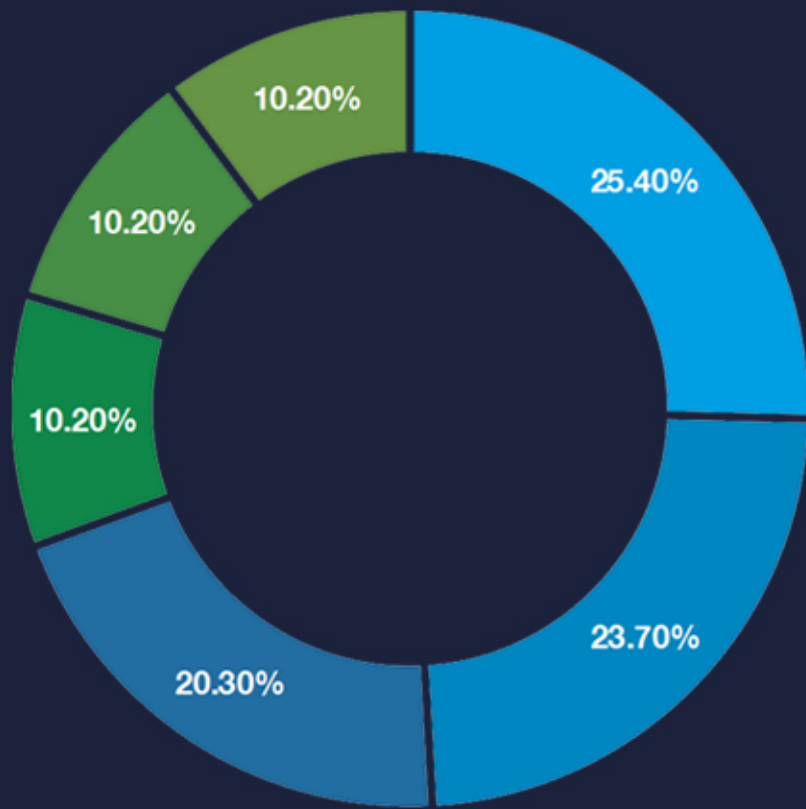

Initial circulation: 1,200,000

Issue price: 1 USDT

Token type: TRC-20

Distribution time: after the subscription round is over, unified distribution before token launch on the AMM DEX.

- Team: 600,000
- Reserve: 560,000
- Seed: 480,000
- Presale Round: 240,000
- Subscription Round: 240,000
- Liquidity: 240,000

Seed round 20.3%

Project start-up funding raising

Presale round 10.2%

Participation through: Discord whitelist

Personal limit: 2,000USDT

Upper limit: 120 pieces of whitelist

Subscription round 10.2%

No personal limit; Divide equally according to the investment of USDT proportion, and will return the excess USDT to the original address. The unsold tokens will be burned directly.

Team 25.4%

Vesting Period: 3-month lockup; vesting over 12 months from the 4th month.

Liquidity 10.2%

Add AMM DEX initial liquidity injection.

Reserve 23.7%

Used for yield farming incentives and market operations;

The address will be disclosed and supervised on blockchain.

5. Yield farming

We will start the yield farming function shortly after the launch. Users can obtain equity tokens by add their DZI into the liquidity pool. Stake equity tokens through the official website will receive DZI rewards.

The staking DZI is also affected supply adjustment, which means that when the price continues to be higher than 1 USDT, you will receive both dividend rewards and staking incomes.

6. Token Sale

7. Roadmap

- Launch Rebate Function
- Launch Online Yield Farming Function
- Integration with Multiple DApps
