About us

What is cryptocurrency?

Cryptocurrency is a digital asset to use secure financial transactions, control the creation of additional units, and verify the transfer of assets. Cryptocurrencies use decentralized control as opposed to centralized digital currency and central banking systems. The decentralized control of each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database. In 1983, the American cryptographer David Chaum conceived an anonymous cryptographic electronic money called ecash. Later, in 1995, he implemented it through Digicash, an early form of cryptographic electronic payments which required user software in order to withdraw notes from a bank and designate specific encrypted keys before it can be sent to a recipient.

Famous Coins

Today, Famous crypto are bitcoin, ethereum, ripple, dashcoin, litecoin, dogecoin etc,...

Crypto Payments

Now, everybody can use crypto to buy man made products.

A. Bitcoin

The first decentralized cryptocurrency, bitcoin, was created in 2009 by pseudonymous developer Satoshi Nakamoto. It used SHA-256, a cryptographic hash function, as its proof-of-work scheme.

Buy pizza With Bitcoin

At that time, two pizzas were purchased with 10000 bitcoin

Mining

BTC can Mine With GPU/CPU

Supply

21000000

Unit Per BTC

0.00000001 Satoshi
100000000 satoshi Per BTC

SATOSHI CONVERTER

| | |
|-------------------|------------------|
| 1 Satoshi | = 0.00000001 BTC |
| 10 Satoshi | = 0.00000010 BTC |
| 100 Satoshi | = 0.00000100 BTC |
| 1,000 Satoshi | = 0.00001000 BTC |
| 10,000 Satoshi | = 0.00010000 BTC |
| 100,000 Satoshi | = 0.00100000 BTC |
| 1 million Satoshi | = 0.01000000 BTC |
| 10 m Satoshi | = 0.10000000 BTC |
| 100m Satoshi | = 1.00000000 BTC |

B. Ethereum

What is Ethereum?

Ethereum is an open source, public, blockchain-based distributed computing platform and operating system featuring smart contract (scripting) functionality. It supports a modified version of Nakamoto consensus via transaction-based state transitions. Ether is a cryptocurrency generated by the Ethereum platform and used to compensate mining nodes for computations performed. Each Ethereum account has an ether balance and ether may be transferred from one account to another.

Ethereum was proposed in late 2013 by Vitalik Buterin, a cryptocurrency researcher and programmer. Development was funded by an online crowdsale that took place between July and August 2014. The system then went live on 30 July 2015, with 72 million coins "premined". This accounts for about 68 percent of the total circulating supply in 2019.

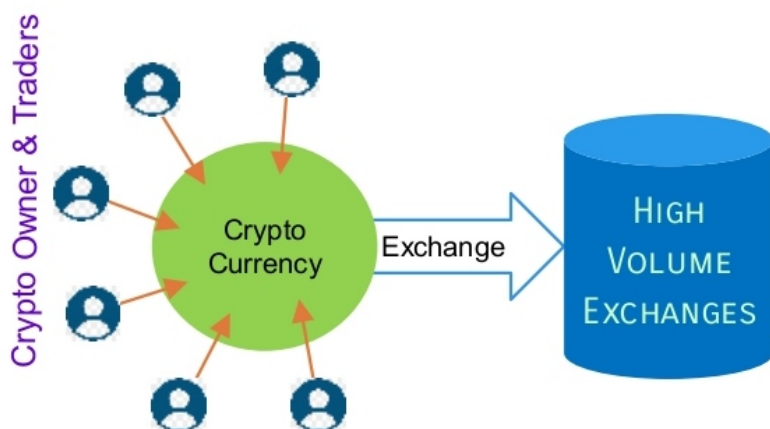

WHAT IS DECENTRALIZED EXCHANGE?

A decentralized exchange (DEX) is a cryptocurrency exchange which operates in a decentralized way, without a central authority. Decentralized exchanges allow peer-to-peer trading of cryptocurrencies. Because users do not need to transfer their assets to the exchange, decentralized exchanges reduce the risk of theft from hacking of exchanges. Decentralized exchanges can also prevent price manipulation or faked trading volume through wash trading, and are more anonymous than exchanges which implement know your customer requirements. In a decentralized market, technology enables investors to deal directly with each other instead of operating from within a centralized exchange. Virtual markets that use decentralized currency, or cryptocurrencies, are examples of decentralized markets.

A. Exchange Concept

There is a market, it also has volatility. So we can always find the market. As the crypto money are flowing into the market, the market must exist for market dependers.

And also the exchanges involved as main importance & money flowing current in crypto aspect.

B. Exchange trading

Traders choose first big market exchange to make trading Crypto/coins which need convenience ,fast draw in/out of money & trusted by user are most important.

39.00 %

So,must have big daily volume for trading and trusted partner like fast deposite and Withdrawal

99.9 %

Every trader is interested in a large number of day-to-day transactions and likes to partner with fast-moving partners.

What is EtherMan Token?

EtherMan token is a base on ethereum blockchain network to use like crypto assest for trading of decentralize exchange and centralize exchanges.to make profit with investment the ETM and crypto payments from online.For the future to be able to pay with ETM tokens and to make a lot of profits from trading on exchanges,we have plan to do for developments to our ETM tokens at online payments and investment plan.

For crypto currency investors, it's not just about choosing and can be used eternally in online payment for modern future resident. It also helps make it accessible & fast.

A. EtherMan Concept

Crypto market become broader & more and then newer coins and tokens are arise every day. When the first time arise in Bitcoin (btc), nobody wanted to buy btc. Someone bought 2 pizza with 10000 btc in that time. Today we can get more than hundreds pizza with just 1 btc. It's true ; no one thought that btc will be higher in market.

We can't guess the moving market & become develop and more wider gradually. We can said to be digital age of money as thousands of coins arise and still arising further. Appeared coin are chosen by trader to stand in the market. Beside there also has coins & tokens that was supposed to broken or no active. Among them, some get successful easily just entering ICO. Some successful after IEO. None of both ICO or IEO, some get successful by uploading into the market with own money. However it's before sell or after sell, we are interested trying to upload on the market whatever it's achieve or not or fail

Listing and Trading

After begin a few days ETM start entered bamboorealy exchange and then few days later we'd reached to Saturn.network exchange. We are discussing with exchange' owners to continue to upload & join to sell or buy in the market. In the present, you can buy ETM on Saturn and bamboorelay exchange both are decentralized exchange. Resale will be opened on our roadmap in July 2020.

Future Integrate

At the future will be integrate to retail market to our ETM tokens for payments and investments.

A. Local Partners

Next step, we have plan to penetration for mobile markets with our investment partners.

B. Local Exchanges

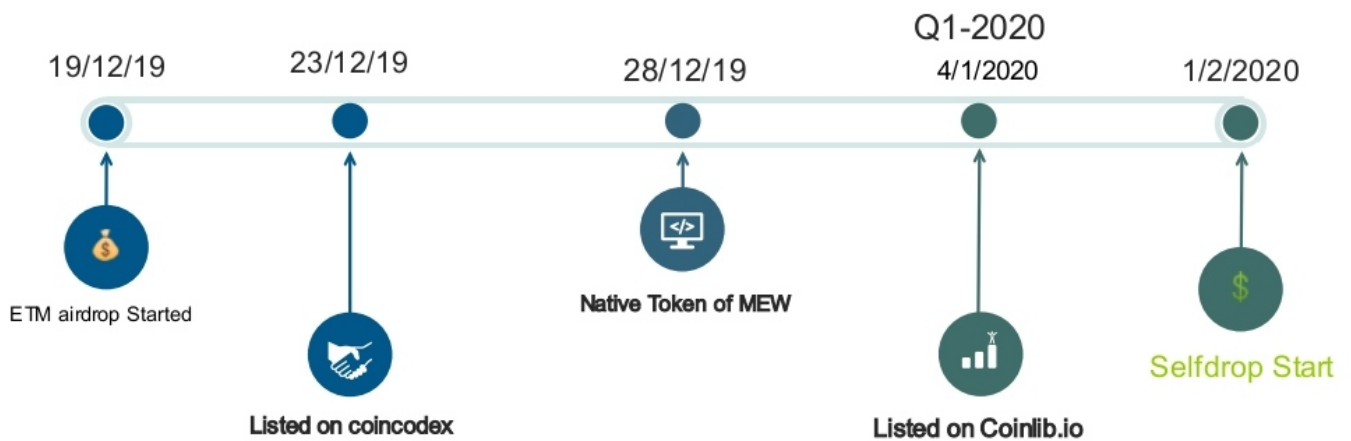

There are many small private exchanges in local country. Also, with these exchanges, we will improve to get convenience of payments and to make money between users more accurate and fast in time. In the near future, online payments will be replaced by cash, and we are ready to break in. We aim to issue ETM pay cards so that we can make cash payments through ETM, targeting local retail outlets and small markets.
