contact@grafenocoin.com

Enabling Blockchain efficiency for GrafenoCoin trading.

GrafenoCoin, joining the Tron network, with greater agility and technology in transactions. The new GrafenoCoin will use the GFNC ticker.

There will be a total amount of 100,000,000,000 GFNC, having 50,000,000,000 frozen for 365 days.

Global vision:

GrapheneCoin (GFNC) is a network utility token TRON traded on trading platform.

Using the proportion of decentralized resources of the TRON peer-to-peer network.

GFNC tokens allow us to create exchanges on exchanges that reduce and eliminate many of the current economic, administrative and logistical inefficiencies in commerce, thereby increasing value and profitability throughout the supply chain.

What gives GrafenoCoin value?

The demand for tools and services on our platform gives the GrafenoCoin (GFNC) token its value, as it serves both as a digital currency and as a distributed motif that is fed into platform trading.

Market:

The supply chain GrafenoCoin (GFNC), composed of raw material, graphene (researchers, companies, investors) and technology companies worldwide.

Definition:

Graphene is a way Of course of carbon, as well as the Diamond, graphite The CNTs and fullerenes. This material can be considered as or more revolutionary than the plastic it's the silicon. When high quality, often very strong, light, almost transparent, excellent heat conductor and electricity.

It's the material strongest ever found, consisting of a flat sheet atoms of carbon thickly compressed into a two-dimensional grid. It is an ingredient of graphite materials other dimensions like fullerenes, nanotubes or graphite.

Basically, graphene is a material that consists of a extremely thin layer of graphite, with the difference of a hexagonal structure whose atoms Individuals are distributed, resulting in a thin layer of carbon.

In practice, graphene is the strongest, lightest and thinnest material (thickness of an atom).

To give you an idea, 3 million layers of graphene are stacked at a height of just 1 millimeter.

Theoretically, this would be achieved in resistance and toughness, skin linear acetylenic carbon (Carbyne)

The retail market value of graphene is estimated at \$ 150.00 a gram.

The target market for graphene comprises several segments, such as construction, paints, batteries (increased load capacity without heating), conductors that reduce temperature and photovoltaic processors.

So far, 98 companies have been mapped, the main potential buyer countries, the United States (USA), China, the United Kingdom, Canada and Germany, which basically use 14 graphene-based products in the paint, battery, 3D printing filament and sports equipment .

In addition, more than 20,000 patent application documents related to graphene, including applications and forms of manufacture.

Many graphene researchers would like to see an electronic market in which graphene can be offered to buyers and investors at prices that are not based on the future market, but on quality.

As GrafenoCoin adds value:

GrafenoCoin acts as a "single currency" for fast global transactions - eliminates problems and loss of value in the global graphene supply chain, the current use of multiple currencies and exchange rates.

GrafenoCoin (GFNC) Can be traded easily and freely in a decentralized exchange.

This means, for example, that Indonesia can sell the research directly to a buyer in the United States, without going through the traditional system that requires banks, loans and intermediaries.

The researcher gets a better price for the swater search. The buyer receives a direct sale.

As a network token Tron, GrafenoCoin transmits and preserves verifiable data on the Ledger blockchain.

This means that it can be used for contracts, price quotes, details and verification of origin, tracking of shipments and more.

This can reduce or even eliminate the need for multiple communications via fax, phone and email, which are now standard in the industry.

As the accounting record of the block chain is decentralized, the data is immune to loss and changes common to centralized stored data servers.

Researchers and companies can use GrafenoCoin to finance sales and purchases of many surveys - so they don't have to rely on loans and intermediaries to keep their businesses and families moving.

This increases the value of graphene for researchers. It keeps researchers and companies debt-free and increases business.

Small investors now have access to the research values of micro lots more directly than those willing to offer them.

This opens the door for thousands of investors who previously had limited access to investments in smaller volumes.

When it comes to investment and real trade, traditional methods are still the order of the day, that is, direct contact between seller and buyer using email, phone, telex and fax.

Now, all these problems can be addressed, simplified and improved with the use of the TRON Blockchain's GFNC token functions.

Distribution GrafeCoin (GFNC) TRON:

TRC10: TRON NETWORK

Asset ID: 1002992

Explorer: <https://tronscan.io/#/token/1002992>

Name : **GrapheneCoin**
Symbol : **GFNC**
emitter : **THPWMNosSTAt5xXsMqxJa9Qi2yEUAqKQAQ**
Reissuable : **At the**
Decimals : **6**
Total offer: **100,000,000,000.000000**
Frozen: 365day **50,000,000,000.000000**
Maximum : **100,000,000,000.000000**
delivery
circling : **11** (Update 08.05.2020)

Platform: Tron Network

- 100% of the tokens will be available for sale totaling:
100,000,000,000 (GFNC).

Because 100,000,000,000 GFNC?

When we design ourthe project, we wanted the GFNC token, it would have as a nominal representation 1 gram = 1 GFNC

With that in mind, a fixed number of 100,000.000,000 (GFNC) was generated.

This number will allow you to have enough tokens to Negotiate on trading platforms and provide liquidity and scale for future growth.

Opportunity:

As the purchase and sale of GrafenoCoin and the advertising of GFNC require the utility tokens need to be purchased by our users to use the platform.

currently GraphenoCoin (GFNC) can be purchased and sold on the Decentralized Exchange and sent and received via TRON Wallet - both functions.

Participation.
