TradePlus Project Report

About Us

Optimizing your Investments
TradePlus is a platform developed to make you optimize your RoI in the cryptospace as we bring to you world's most experienced traders and investors share their live trading blueprints and knowledge. Create or join existing blueprints to maximize your gains from trade. Get real time price of your staked coins with our API from 20+ exchanges.

Mission and Vision

Providing an optimized trading platform where you can not only trade but also showcase your trading skills and expertise and attract interest of other traders who would like to join your pool and play as per your call. Building a platform where there is transparent exchange of information and opens your possibility to avail trade benefits from multiple exchanges without having to register in all.

Our vision is to establish TradePlus unanimously as the most preferred and most trusted trading exchange and the numero uno choice when it comes to traders.
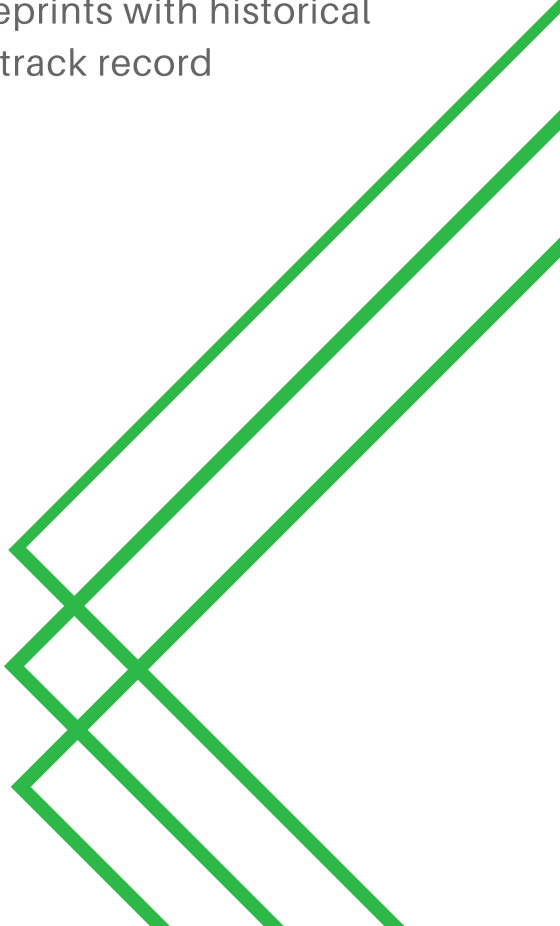

Platform Scope

Trade with confidence and risk free and share earnings from winnings

Crypto market like any other market investments and predictions are always subjected to risks and speculation. Dependency on only human forecasts with no risks and accountability is a major challenge and creates uncertainty. But again, finding reliable trading sources and predictions is always a super challenge in the market as a whole and not only in the worldwide web. In the TradePlus platform every blueprint accountability lies with the creator and every seasoned blueprint owner are rated and rewarded through the historical records of their calls and also our API helps bringing you accuracy, transparency and trust as you keep investing and keep rolling your crypto assets as a trader.

Additional tools for decision making:
- TradePlus API for trader ratings
- TradePlus API for real time price of pairings from 20+ exchanges·
- Live Blueprints with historical success track record

Getting Started

Getting enabled on TradePlus is simpler than you can imagine.

Simply register on TradePlus platform and transfer BTC or TDPS to your in-platform wallet. Once you have the fund, you can be use it further towards buying your share in existing Live Blueprints of available coins.

If the blueprint you join is a success, share your profits and trading fee with the Blueprint owner.

In case of a failed blueprint, get back your deposited coins and your staking chance back from the blueprint owner.

You can monitor all your historical transactions from a single window dashboard and also check the price of assets real time using our real time price calculator API that shows you data from 20+ exchanges.

Creating a Live Blueprint

Register / Login to TradePlus platform to showcase your skills and call for investments on your Blueprint. Deposit BTC/USD or any popular pairing token in your Tradeplus deposit wallet to buy trading credit which in turn can be converted to the coin of your choice through popular trading pairs. Remember to provide details of the following for a transparent blueprint that will attract attention of your investors.

- Your Username
- Exchange in which you will trade
- Trading Pair
- Trade Status
- Entry Price in exchange
- Exit Price from exchange
- Expiration of Blueprint
- Entry Time stamp in exchange
- Exit Time stamp from exchange
- Wallet deposit address
- Purchase price
- Estimated Profit
- Exchange Trading Fee

TradePlus API gives you realtime asset pairing price with BTC/USD and the live price of coins from 20+ exchanges without having to check any other calculator or platform.

Join a Live Blueprint

A successful blueprint not only gives you profit but also rewards you the trading fee automatically credited to your deposit wallet.

Make the most of your trading funds!
If you are a new user and unsure of creating a blueprint of your trade or want to try out different exchanges and assets but do not want to register in multiple exchanges, you can instead co-invest your share with other creators and share the profits. This helps you optimize your investment pool and also helps you diversify your investments through various exchanges across the world without having to register in each one of them. Also your chances of losing funds are also minimized by sharing of funds and risks with the creator of the blueprint. The outcome of a live blueprint can be categorized to 3 results and your profits or losses are also shared accordingly.

1. **Successful Blueprint** - **Hit the Entry & Exit price points**
2. **Failed Blueprint** - **Hit the Entry but fail the Exit price points**
3. **Neutral Blueprint** - **Non - hit Entry & Exit price points**

Wins and Losses

Know your opportunities and threats when you create or join a blueprint.

As you are aware of by now, the outcome of a live blueprint can be categorized to 3 results and your profits or losses are also shared accordingly.
Now let us break them individually to make you aware of what you can win and what you can lose whilst trading.

A Successful Blueprint
Result - Hit Entry & Hit Exit

Creator of Blueprint
- You win the staking fee
- You win staked share
- You win the staked coins
- You win the BTC/USD profit

And you win the deposited BTC from the system as it pays you your profits credited in BTC.

Gain - WIN your Staking fee & coins

Investor in a Live Blueprint
- You win the stake chance
- You win the staked coins
- You win the deposited coins

Also, get payment with profit coins in your system deposit wallet after the system pays the Creator BTC back.

Gain - WIN your Staking share

Wins and Losses

A Failed Blueprint
Result - Hit Entry & Non - Hit Exit

Creator of Blueprint
- You win staked share
- You win your share of staked coins

Investor in a Live Blueprint
- You win back your stake chance
- You win back your deposited coins from the pool

Loss - You lose your share of staking and trading fee

Loss - You lose your share of staking and trading fee

A Neutral Blueprint
Result - Non - Hit Entry & Non -Hit Exit

Creator of Blueprint
- You win the deposited BTC
- You win the staked coins
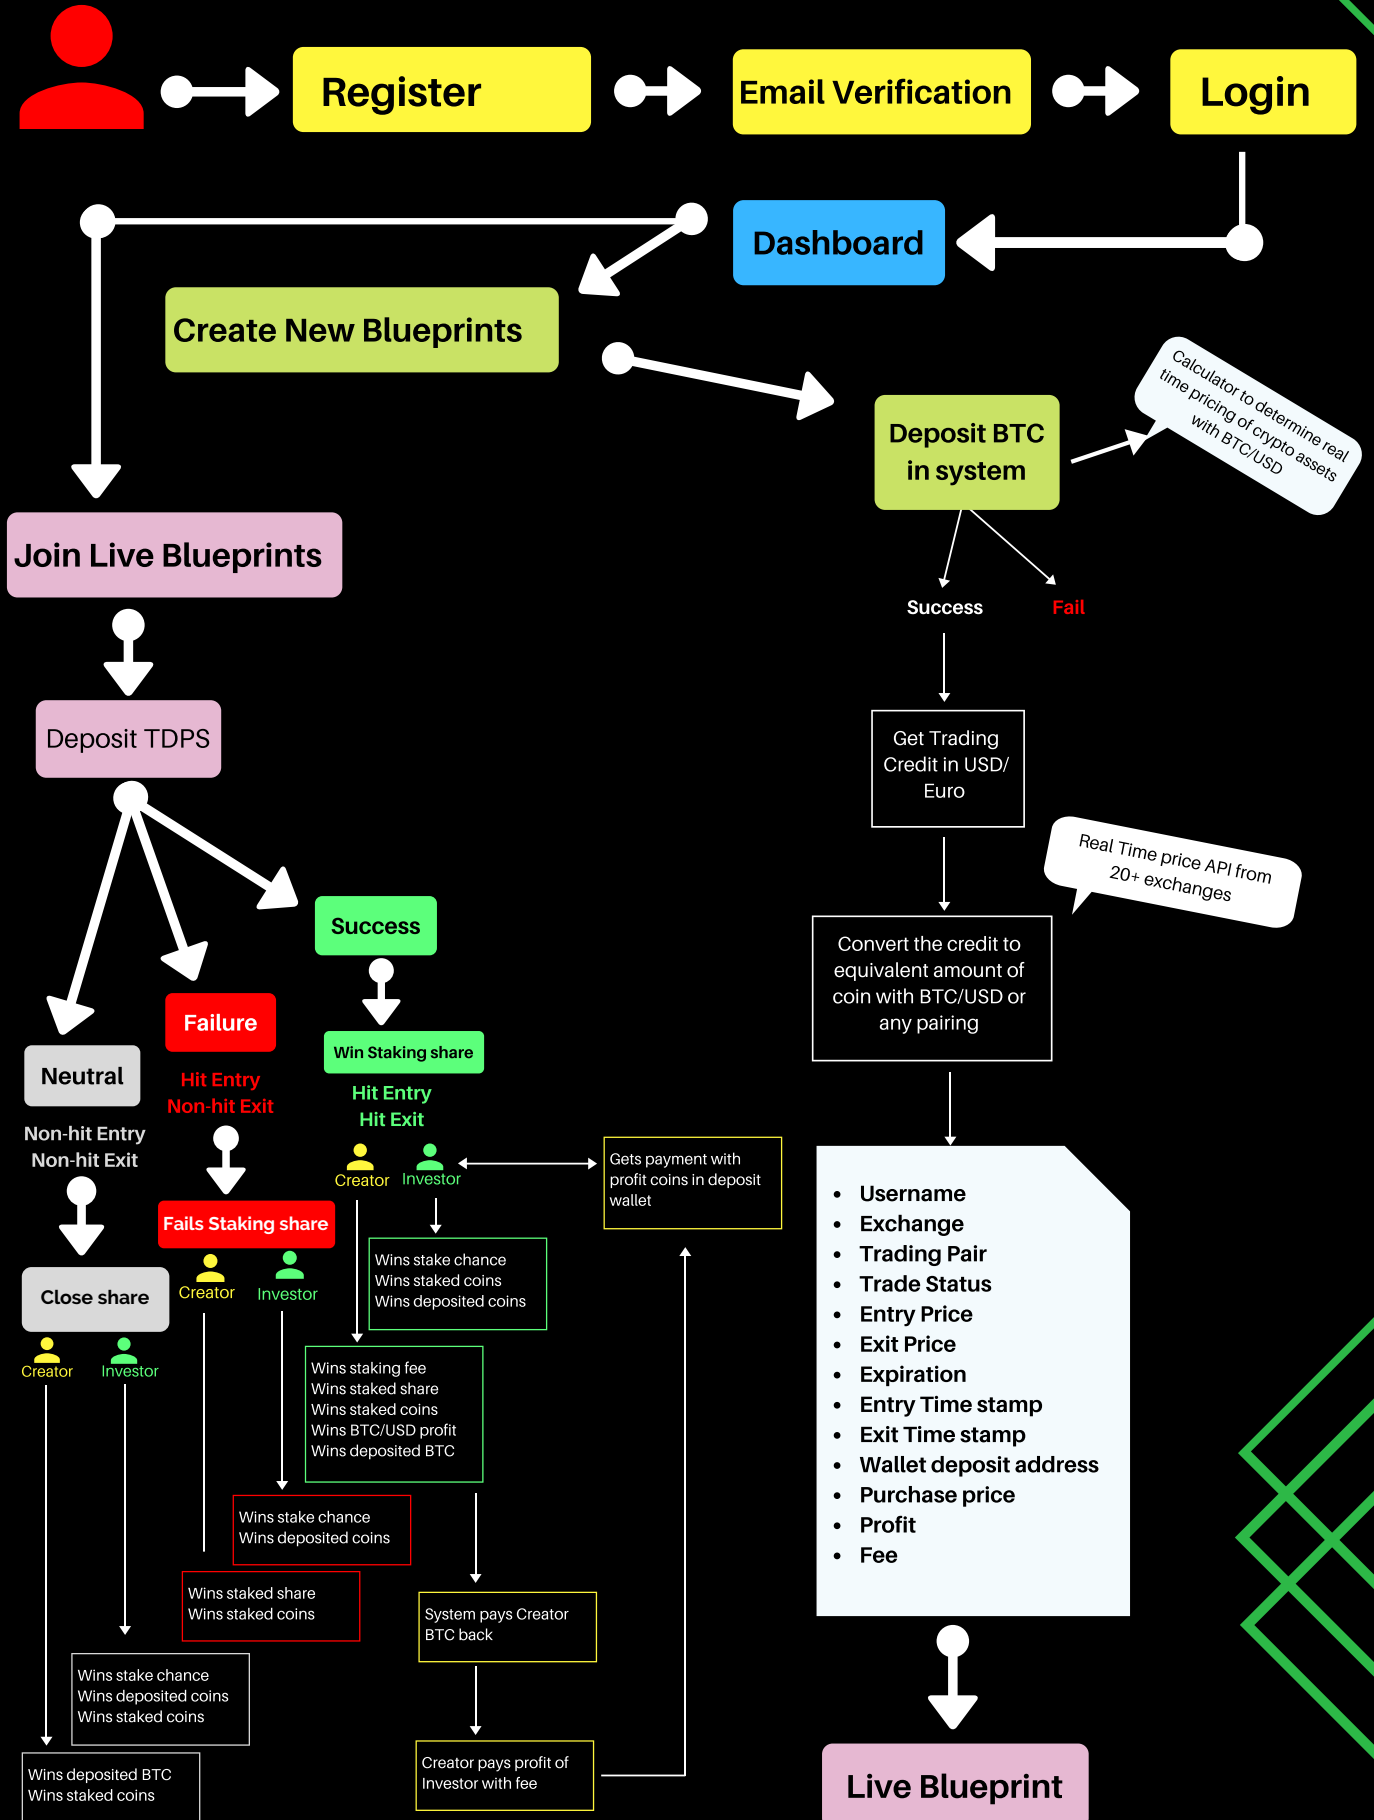

Investor in a Live Blueprint
- You win the stake chance
- You win your share of deposited coins
- You also win your share of staked coins

No Gain, No Loss as you close share with your investors

No Gain, No Loss as you close share with your investors

Live Blueprint

Tradeplus Coin - TDPS

TradePlus is the core token of exchange in the TradePlus platform. The coin is built on PIVx and Quark for simple and easy usage, privacy, transactional speed and safety. Paired with BTC/ USD/ and other popular pairings to be available soon TDPS is available in popular exchanges of today.

Private and Instant

PIVX/QuarkThe PIVX employs a custom version of the popular Zerocoin protocol to anonymize transactions by obfuscating the addresses associated with coins. PIVX can be completely anonymous, preventing blockchain analysis from revealing recipients and senders.This in-house version of Zerocoin produces smaller and faster transactions and comes with added transaction fees and speed reductions while also working to live up to the goals of super fast transactions and negligible fees. To spend coins anonymously, users need to convert their standard TDPS tokens into 'zTDPS' tokens and then send them to any TDPS address. On the other end, a user receives TDPS tokens just like any normal transaction, and the transaction is both verifiable on the blockchain and anonymous as to who sent and received those coins. Using what the PIVX SwiftX, transactions are nearly instant and coins are spendable within seconds of being sent. With a block time of 60 seconds and a global network of masternodes constantly verifying transactions, the PIVX/ Zerocoin protocol makes instant spending and receiving a reality. This is further enabled by very small transaction fees, usually around the order of fractions of cents per transaction. This is vital to the mission of owning your day-to-day purchases and payments.

Coin Specifications

Coin Name	**TradePlus Coin**
Ticker	**TDPS**
Masternode Collateral	**3000**
Block Distribution	**Random**
Total Supply	**80 000 000**
Premine	**560 000**
Block Time	**60 Second**
Maturity	**61 Block**

Masternode Rewards

Project Milestones

1ST QUARTER

- Project planning
- Formalization of project team
- Distribution of tasks
- Whitepaper release
- Blockchain creation
- Mainnet launch
- Platform launch
- Website launch
- Bitcointalk Ann release
- Beta testing of platform services
- Push strategies by free memberships or trials, discounts and open house events

2ND QUARTER

- Staking Wallet release
- Public MN Presale
- 1st Exchange listing
- Masternodes.online listing
- Social platforms release
- Pull strategies: Contests, promos, online marketing, word of mouth, referral programs, online commercials, banner advertisements

3RD QUARTER

- 2nd Exchange listing
- Coinmarketcap listing
- Platform Development with new features
- Team expansion
- Call to action marketing: turning web traffic into sales through enticing text and graphics on website or social media channels

4TH QUARTER

- Campaigns to onboard more users
- User Analytics & ratings
- Android wallet release
- Mac wallet release
- Reviewing the platform performance and planning new developments for the future
- PR marketing: taking advantage of media relations and build stronger connections while simultaneously carrying out our marketing and advertising initiatives

Future Goals

What we have to work in the coming years

1. Build a strong follower base by rigorous quality standards
2. Influencers growth by adding more and more established traders and companies in the platform
3. Increase the social media reach enhanced social media activities and advertisements and offers
4. Mobile application to trade on the Go. Too lazy to access your laptop, we will be bringing a lite version for users that can help you trade and check status from your hand held while on the go.
